Lancaster Farming

VOL. 18 No. 2 | Lancaster Farming, Saturday, April 21. 1973 | $2.00 Per Year

James Widders and Howard Brubaker, technicians at Penn State's Southeastern Field Research Laboratory, are well into their 1973 program for tobacco research.

A Look At The Research Farm

If a commercial crop grows in Lancaster County, chances are very good that it's being studied at the Southeastern Field Research Laboratory near Landisville. The laboratory is actually an 88-acre farm owned by Penn State, and operated by John Yocum.

Yocum holds the title of assistant professor of agronomy on the Penn State faculty. He has BS and MS degrees in agronomy from that institution and he's held his present post since 1961. One recent morning, he chatted with LANCASTER FARMING about the work at the farm and about the farm itself.

"Research has been going on in Lancaster County since the 1890's," Yocum said, "but the first official laboratory was started in 1902. That was in Ephrata, and they did tobacco research."

In 1930, research activities were moved to a farm along Lancaster's Roseville Road where they remained until 1954. From 1954 until 1956, the work was done in Landisville on a site now occupied by a community swimming pool. And in 1956, operations were moved to the present location.

Tobacco was about the only crop studied here until 1954, and there is still a lot of work being done with tobacco. Yocum and two full-time technicians, James Widders and Howard Brubaker, conduct tests every year for disease resistance, yields and curing qualities. They are doing some work on cross-breeding, trying to develop a lighter leaf color. And there is a renewed research effort on chewing tobacco.

Other crops studied at the farm are corn, small grains, alfalfa, soybeans, a few vegetables crops and grapes.

With some 20 acres, corn is the biggest crop under study. Yocum and his staff develop corn hybrids especially suited for this area. These hybrids are then grown and marketed by commercial companies. Yocum pointed out that hybrids are developed from inbred strains of corn, and that most of the inbreds come from land grant colleges.

Most of the corn research at the center involves breeding, although some commercial varieties are grown and tested for silage yields. Some of the commercial varieties are inoculated with diseases, too, to test their resistance.

Much of the corn, as well as other crops, is sold to area farmers after harvesting. Yocum noted that they sell whatever they can, except for those crops grown with the use of pesticides

Court Upsets Milk Board Price Hike

Dairymen here and across the state were stung by a Commonwealth Court decision Thursday to revote a state order granting dairy farmers a two-cent-a-quart price hike for milk.

Inter-State Milk Producers' Dr. Edward Honan, said the action came as no surprise to him. He had hoped, however, that in declaring the milk board's action illegal, the court would have tried to figure out some way to save the price increase for dairymen. "I think this is just one more move by the administration to get rid of the milk marketing board," Honan told LANCASTER FARMING on Friday morning.

"Inter-State and other milk producer coops had asked chairman Harry Kapleau to open up his hearings so any action the board might take would be legal and binding. His refusal to do so, demonstrates, at least to me, his attempts to undermine the board. Now he's got dealers and producers mad at each other, and I don't think that's going to do the milk industry any good at all."

William Deisley, president of Moore Dairies, said that as far as he's concerned, his company has increased prices to customers and payments to farmers. They are going to stick with those increases.

Deisley is also head of the Lancaster County Milk Dealers Association. While he said he couldn't speak for other members of the association, Deisley did say that he felt any move by any company to take back the increases would be "stupid".

Deisley also accused the Shapp administration of playing politics with the milk market at the expense of dealers and farmers throughout the state.

"Farmers needed the price increase the courts have taken away from them," Deisley said. "And dealers needed the extra money to pay that increase. We're going to continue paying our producers the 92-cents a hundred increase, and we're going to keep the retail prices up. I don't hope anybody goes down in price, because that will just hurt the entire industry."

The 7-0 decision said the Milk Marketing Board "illegally prohibited" milk dealers and consumers from presenting testimony at a hearing on the proposed increase.

The board, accused of a "severe abuse of discretion" was ordered to hold further hearings to get consumer and dealer viewpoints.

The Pennsylvania Association of Milk Dealers filed the court action against the board's March 8 action.

The boost was passed on to consumers in a few areas, an association spokesman said, but he called the overall effect spotty. Competitive pressure and the pending court action kept most retail prices unchanged.

The spokesman said he expected milk prices to continue unchanged despite the ruling. He noted that dealers might pass back the two-cent hike to farmers as a bonus rather than reduce consumer prices in those areas where they were raised.

Harry Kapleau, chairman of the Milk Board, said, however, "A good number of dealers have increased their home delivered prices." He said he did not have exact figures but said home deliveries were boosted in Harrisburg, Pittsburgh, York, Lancaster, Scranton, Wilkes-Barre and Reading.

In-store prices increased in a few areas but not as many as

Martin Wins Editor of the Year Award

Gary Martin, former farm editor of the Lancaster Intelligencer Journal, received a Farm Editor of the Year award on Monday afternoon in Washington, D.C., during the annual meeting of the Newspaper Farm Editors of America.

Presenting the award was Rex B. Conn, farm editor for the Cedar Rapids (Iowa) Gazette, and a past president of the NFEA. The award consisted of a plaque and a check for $100.

Martin competed with other farm editors from across the country for the award. He won on the strength of a series of articles dealing with milk production and marketing.

A few weeks ago, Martin left the newspaper to become a public relations writer for Sperry New Holland, a local manufacturer of farm equipment.

Gary G. Martin, right, is shown Monday as he received a Newspaper Farm Editor of the Year award. With him as he received the award from Rex Conn, of the Cedar Rapids Iowa Gazette, was his wife, Elsa.

Contestants Sought for Princess

Contestants are being sought for the 1973 Dairy Princess Pageant. Last year's winner, Miss Donna Book, will pass her crown on to a new princess during ceremonies on June 23 at the Farm and Home Center.

Any young lady who has completed her junior year in high school, who has not yet turned 21, and who is the daughter of a dairy farmer, farm manager, herdsman or dairyfarm owner is eligible to compete in the local contest.

Anyone interested in applying may contact Mrs. Robert E. Gregory, Lititz RD1, before May 21. Her phone number is 733-7584.

The winner of the local contest will compete later in the year in the state contest. Throughout the state, local dairy princesses help promote the dairy industry by appearing in promotional programs at shopping centers, malls and food stores. They speak to radio, TV and school audiences. They also appear in parades, meet dairy industry leaders and attend a summer training seminar.

Omaha Cattle

Thursday, April 19

Compared previous week's close: slaughter steers and heifers mostly 50 higher, instances 75 higher. Cows 25-50 higher, bulls fully steady. Small feeder supply strong to 50 higher.

Four day receipts 13,900 as compared 9100 previous week and 18,800 a year ago. Slaughter steers approximately 37 percent and heifers 40 percent. Fairly liberal percentage Choice and an increased number of relatively clean cattle were on offer. Cows 12 percent and feeders 6 percent. A reasonable measure of stability returned to the fed cattle trade for the first time in five weeks. The seemingly chronic unfavorable weekend weather again prevailed to curtail early marketings but demand was broadened by the return to peration of several packers who had been idled for varying periods because of short supplies and the generally uncertainty which surrounded the livestock and meat industry. On the last rounds, demand by some interests was geared to accomodate a non-slaughter holiday in observance of Good Friday.

SLAUGHTER STEERS: Load High-Choice and Prime 1241 pounds predominantly grade 3 46.85, other same grade 989-1322 3-4 46.10-46.50, large share at the latter price. Choice 975-1300 2-4 closed 44.75-46.00 those at inside price often carrying modest amount of mud. Mixed Good and Choice 950-1250 44.00-44.75. Good 41.50-44.00, looad 1250 pounds Holsteins 2-3 42.00. Standard and low-Good 40.00-41.50.

Average cost slaughter steers first three days 44.96 average weight 1119 pounds as compared 44.23 and 1081 pounds previous week and 34.53 and 1150 pounds a year ago.

SLAUGHTER HEIFERS: Two loads and part loads High-Choice and Prime 1000-1114 pounds 3-4 45.25-45.50. Choice 850-1050 2-4 closed 43.50-45.00, some load lots at latter price with end Prime. Mixed Good and Choice 750-975 43.00-43.75. Good 39.50-43.00. Small lots Standard and low-good 38.00-39.50

COWS: Utility and Commercial 32.50-34.50, limited supply Utility 34.75-35.00. Canner and Cutter 29.00-32.50, mixed Cutter and low-Utility 32.75-33.50. Shelly Canner 26.00-29.00.

BULLS: Utility, Commercial and Good 37.50-41.00, Commercial 1-2 42.00-43.50. Cutter and low-Utility 33.00-37.50.

FEEDERS: Outshipments of approximately 700 head from regular market trading little changed from previous week. Prices strong to 50 higher.

STEERS: Three loads Choice and Prime moderately fleshy 891 pounds 46.00. High-Good and Choice 754-1025 42.50-43.25, few consignments Choice 43.50-44.00. Several loads Standard and low-Good Holsteins 40.50-41.50.

HEIFERS: Load Choice and Prime 544 pounds 49.00.

COWS: (On Wednesday) Commercial 28.50-33.50. Utility 33.50-36.00. High Yielding Utility 36.00-36.50. Cutter 28.50-33.50. Canner 23.50-28.50.

Local Grain

Thursday, April 19

These prices are made up of the average prices quoted by five participating local feed and grain concerns. It should be noted, however, that not every dealer handles each commodity. All prices are per bushel except for ear corn which is per ton.

The average local grain prices quoted Thursday, April 19, 1973, are as follows:

	Bid+	Offered+
Ear Corn	44.33	50.66
Shelled Corn	1.73	1.93
Oats, Local	.87	1.08
Oats, Western	1.25	1.35
Barley	1.34	1.68
Wheat	2.08	2.28

+Bid is the price the dealer will buy from the farmer delivered to the mill. Offered is the price the dealer will sell for at his mill.

Poultry Market Reports

Eastern Pa. and N. J.

Wednesday, April 18
LIVE POULTRY

Prices higher on light type hens. Demand good for fully adequate offerings as plants curtail operations over Easter weekend. Offerings of heavy type hens adequate for a fair but unaggressive interest.

Prices paid at farm: Light type hens 9-12, mostly 12½-13 in Pa., mostly 11-12 in N.J. Heavy type hens TFEWR.

Delmarva

Wednesday, April 18
Broiler-Fryer Market

Ready to cook demand generally light. Processing activity is reduced. Less than trucklot prices ranged unchanged to occasionally lower. Live supplies adequate. Pool trucklot prices for Thursday arrival: U.S. Grade A 46-49½ mostly 46; Plant Grade 45-47½, mostly 45.

New York Dressed Meats

Thursday, April 19

Compared with Wednesday, prices steady for red meats and pork.

Small supplies will evidently be mostly cleared by close of business as may sales coolers were not operating Friday. Beef and lamb prices held weak due to poorly balanced demand with beef round and loin cuts along with rough cuts along with lamb, loins and chucks under pressure all sessions.

Pa. Broiler Placements Up 3 pct.

Placements of broiler chicks in the Commonwealth during the week ending April 14, 1973 were 1,196,000. The placements were 3 percent above the corresponding week a year earlier, but 11 percent below the previous week. Average placements during the past 10 weeks were 2 percent above a year earlier.

Settings for broiler chicks were 2,055,000 - 4 percent above the previous week and 8 percent above the comparable period a year earlier. The current 3-week total of eggs set is 8 percent above the same period a year ago.

Inshipments of broiler-type chicks during the past 10 weeks were zero compared with 10,000 a year ago. Outshipments averaged 256,000 during the past 10 weeks, 1 percent below a year earlier.

Placements in the 21 States were 63,521,000 - 2 percent above the previous week but 2 percent below the same week a year earlier. Average placements during the past 10 weeks were 5 percent below a year ago.

Settings were 78,502,000 - about the same as the previous week but 2 percent below a year earlier. The current 3-week total of eggs set is 2 percent below the comparable period a year ago.

Another example of pollution is instant analysis.—**Harold P. Beason,** Smith County (Kans.) Pioneer.

We spend $20,000 for a bus so the kids won't have to walk to school and then spend $100,000 for a gymnasium so they can get some exercise.—**Ray Savage,** The Thermopolis (Wyo.) Independent Record.

PSU Reports Growing Degree Days, Rainfall

Penn State this week began its annual series of weekly crop and weather round ups with a report on weather conditions for the week ending April 16.

In Lancaster, the average temperature for the week was 44 degrees, 6 degrees under the normal average for the time of year. Growing degree days for crops that start at 50-degrees totaled 23 between April 1 and April 16, or 15 more than in an average year.

In Lancaster, the average temperature for the week was 44 degrees, 6 degrees under the normal average for the time of year.

Growing degree days for crops that start at 50-degrees totaled 23 between April 1 and April 16, or 15 more than in an average year.

Rainfall for the week totaled 0.67-inch. In the period April 1 to 16, rainfall totalled 4.08 inches, or 2.16 inches more than normal.

Milk

home deliveries, he added.

Kapleau said he won't decide until after meeting with farm groups and lawyers next week what action the board will take. It could appeal the ruling to the Supreme Court or hold statewide hearings with testimony from consumers and dealers and then issue another ruling.

Milk dealers have paid farmers an additional $750,000 in the month the hike has been in effect, the milk dealer spokesman said. He said he expected most dealers to deduct that amount from their bills next month.

"Some might say, 'Keep the change,' but I doubt it," he said.

A spokesman for the Pennsylvania Farmers Association said he was "disappointed" by the ruling.

"We had hoped they would hand down an order to continue the increase and go into a full hearing with the dealers," he said.

About 4,000 dairy farmers are affected by the board price orders; the remainder of the 20,000 dairy farmers in the state come under federal orders.

FEED LETTER

$1.00/TON

No, I'm not offering to sell you a ton of our new controlled release liquid supplement for $1.00 per ton. What I am offering is to contribute one dollar to your favorite farm organization, for each ton of supplement you buy at the regular price. This offer will continue from now until June 30.

We all have a stake in Pennsylvania agriculture and the organizations that promote and nurture it. I believe that these organizations perform a vital service to farmers by keeping them up to date on the latest ag developments. Their educational value is without limit. And who can deny the contribution made to farming by such groups as FFA, FHA, AND 4-H. That's why I'm happy to make this offer.

I'm also excited about this new liquid supplement. It has proven itself to be more effecient and safer than other liquid supplements. Its economy as compared to natural protein as well other urea based feeds is also worthy of mention. I hope all farmers will become familar with the benefits of this new product.

Why not take me up on this offer? Learn the benefits of a truly new product and help your favorite farm group at the same time.

THE OLD FARMER'S ALMANAC

APRIL 23-29

Rise and shine, warm and fine.

Streams are running high now . Daylight Saving Time begins April 29 (set clocks ahead one hour before retiring on the 28th) . . . Last quarter of the Moon April 25 (fish bite best during last quarter and new Moon) . . . Ice should be out all lakes now . . . Average length of days for week, 13 hours, 55 minutes . . . First soda fountain patent April 24, 1833 . . . Canadian geese arrive home . . . The wild pear is now in bloom . . To see what will vex you, peep where you shouldn't.

Old Farmer's Riddle: Why are soldiers and dentists alike? (Answer below)

Ask the Old Farmer: At a bicentennial celebration recently held, people were selling wooden nickels and having kangaroo courts Could you give any information concerning the origin of these two? T J.M., Lynn, Mass.

A kangaroo court is commonly a court that is unauthorized, such as being organized in a hobos' "jungle" — a camp or jail. There was, at one time, a county court in Ohio where the judges collected no pay except fees, which was so called. Of wooden nickels, we only know this: they don't work in slot machines.

Home Hints. To remove dirt from cuffs and collars, rub the rings heavily with ordinary chalk, let sit overnight, then wash as usual . . . As a last resort, try using hydrogen peroxide or rubbing alcohol to remove ketchup stains *Riddle answer* They both have to drill.

OLD FARMER'S WEATHER FORECASTS

New England: Beautiful spring weather most of week with highs in 70s; end of week partly cloudy and warm with scattered showers

Greater New York-New Jersey: Partly cloudy to start, then very hot; clear and unseasonably hot latter part, then light rain and cool

Middle Atlantic Coastal: First part of week clear and warm; end of week clear and unseasonably hot, then rain.

Southeast Coastal-Piedmont: Clear and very warm all week.

Florida: Clear to start, then becoming much warmer; cloudy and warm latter part, showers in south.

Upstate & Western N.Y.-Toronto & Montreal: Clear and unseasonably warm most of week; light rain and cooler for weekend.

Greater Ohio Valley: Clear and very warm until end of week; then moderately heavy rain and cooler

Deep South: Week begins clear and very warm, then light rain in northwest; rain latter part, cloudy along coast.

Chicago and Southern Great Lakes: Most of week clear and quite warm; rain and cooler latter part.

Northern Great Plains-Great Lakes: Clear and warm at first, then scattered showers; end of week pleasant, then rain.

Central Great Plains: Generally clear and very warm for most of week; rain latter part, then cool.

Texas-Oklahoma: Cloudy to start, then rain; rain continuing to end of week.

Rocky Mountain Region: Week begins clear and very warm, then cloudy and cooler; clear again latter part.

Southwest Desert: Clear and warm to start, highs in 80s, then rain and cooler; cool rain continuing to end of week.

Pacific Northwest: Clear and warm at first, then showers and cooler; end of week cloudy and mild.

California: Clear and very warm to start, then cloudy and cool; week ends partly cloudy and very warm.

Dairymen Find Computer Program Profitable

Dairymen around the nation are making extensive use of an audio-response computer located in Michigan. It is available to dairymen in several States through touch-tone phones which serve as remote computer terminals, says Dr. Buel Lanpher, Extension economist in farm management, U. S. Department of Agriculture.

During the present period of rapidly rising feed costs and fluctuations in protein prices, dairymen have called most often for the "least-cost dairy ration," reports Dr. Lanpher. This is also true of other computer systems serving farmers. The remote terminals usually are located in area or county Extension Service offices. Dairymen used the Michigan system 4,733 times in 1972 to find out the least-cost ration that could be formulated from available feeds. Dairymen in New Hampshire recently joined the system.

What does it cost a dairyman to use this computer service?

Twenty-four dairymen in Ingham county, Mich., in their second year of using the system, report that savings on feed costs quickly pay for computer fees. Besides saving on the cost of feed, 18 of them increased herd production by more than 190 pounds of milk per day.

The Michigan computer system has 131 different economics-related programs. The "Capital Investment Model" was used 917 times in 1972, and "Crops-Livestock Income Possibilities" was requested 390 times. Farm management consultants, bankers, and others making financial decisions with farmers also are able to join this computer "farm management network" through their State Extension Services, stresses Dr. Lanpher.

PENB Changes Name, Location

Dr. L. A. Wilhelm, President of the American Egg Board (formerly Poultry and Egg National Board), has announced the relocation of the national headquarters office effective May 1, to 205 W. Touhy Ave., Park Ridge, Ill. 60068.

The Board's office is presently situated at 18 S. Michigan Ave., in Chicago's loop. The new location is in a Northwest suburb of Chicago.

The AEB offices in Park Ridge will be on the first floor of a two-story steel and glass building, in a semi-residential area. The landscaped grounds provide adequate parking for the employees in the building that houses approximately 20 other companies. Out-of-town visitors will find it a convenient 15-minutes from O'Hare International Airport.

"The new location provides additional office and mailroom facilities as we add new staff members and increase the promotional programs of AEB," concluded Wilhelm.

The new address and phone number, effective May 1

Lasso® plus atrazine tank mix...gets the foxtails and lots more grasses. Lots of broadleaves, too.

Yellow Foxtail | Green Foxtail | Giant Foxtail

Lots of grasses and broadleafs growing in corn mean nutrients and moisture going to waste. Your corn has to grow with "leftovers."

To give your corn the "full course" it needs, tank mix Lasso plus atrazine. To take care of the grasses like the foxtails, smartweed, and others. And to get pigweed, smartweed, and other broadleaves. If rotation to soybeans is how you want to go, Lasso plus atrazine is the way to go. Because you use less atrazine there's less chance of carryover problems to next year's beans.

That's what you expect from your herbicide!

Yesterday's soybean meal price was $294.00 a ton.

Can you afford it?

Soybean meal and other protein supplement prices are skyrocketing That means it's costing you more than ever before to produce a pound of meat or milk What's the answer?

For thousands of livestock and milk producers in the United States and Canada, the Harvestore System is the answer

The Harvestore System lets you keep and feed more of that good protein you grow So your supplement bill is greatly reduced or eliminated entirely.

Want to beat the high cost of supplement? Then call your Harvestore dealer today He'll show you how you can pay for a Harvestore System in protein savings alone

SPICY ORANGE SALAD

An unusual molded salad for all seasons!

- 1 cup water
- 1 stick cinnamon
- 8 whole cloves
- 1 package (3 oz.) orange-flavored gelatin
- ¾ cup (6-oz. can) frozen orange juice concentrate, thawed and undiluted
- 1 tablespoon lemon juice
- 1 can (11 oz) mandarin oranges, drained

In saucepan, combine water, cinnamon and cloves; bring to boil. Reduce heat; simmer 10 minutes Remove spices Add dry gelatin; stir until dissolved. Add orange juice concentrate and lemon juice; mix well. Chill until slightly thickened, about 1 hour. Fold in mandarin oranges Pour into oiled 3-cup mold, square pan or serving bowl Chill until firm, at least 4 hours

Yield 4 to 6 servings

Cof C Urges "Yes" Vote in Referendum

The board of directors of the Pennsylvania Chamber of Commerce has endorsed "Joint Resolution No. 1" which will appear on the May 15 Primary Ballot.

The proposed constitutional amendment would make it possible for the state legislature to amend property tax laws so that lands currently being used for agricultural purposes could be assessed and taxed on the basis of their use, rather than their market value. The present Pennsylvania Constitution mandates that farm land be assessed in the same way as other land -- on the basis of the market value.

"A green light from the state's voters for this suggested amendment will help assure that Pennsylvania's agriculture industry will grow and prosper," Chamber president Victor C. Diehm said. "I therefore urge a 'yes' vote for 'Joint Resolution No. 1' on May 15."

SAVORY POTATO SAMOSAS

(Deep-fried Indian Turnovers)

Potato Filling:

½ pound (carton or plastic bag) frozen full straight-cut *or* crinkle-cut French fried potatoes
½ cup frozen green peas
2 tablespoons vegetable oil
½ teaspoon mustard seed
½ cup finely chopped onion
1 tablespoon water
1 teaspoon each, ground coriander and fennel seed
½ teaspoon each: curry powder and ground ginger
¼ teaspoon each: ground cumin and ground turmeric
⅛ teaspoon cayenne *or* red pepper

Pastry:

1 package (11 oz.) free-flowing pie crust mix

Fat *or* oil for frying

Thaw frozen potatoes and peas; cut French fries into ½-inch pieces. In a heavy 10-inch fry pan, heat oil; add mustard seed and cook till seeds begin to burst. Add onion and fry, stirring constantly, till golden. Stir in potatoes, peas, water and remaining 7 spices. Cover and simmer, stirring occasionally, for 10 minutes or till potatoes and peas are fork-tender. Turn potato mixture out onto a plate and let cool. Prepare pastry as package directs. On a lightly floured surface, roll out half of pastry; cut into 7 or 8 5-inch circles. Spoon 1 tablespoon Potato Filling on half of each circle. Moisten circular edges with water. Fold pastry over filling; press edges closed with finger or fork. Slit or prick tops. Repeat with rest of pastry. Fry several Samosas at a time in deep hot fat (375 degrees on deep-frying thermometer) for 3 to 4 minutes or till golden brown on both sides. Drain on paper towels; keep warm in a 200-degree oven. Serve with banana chips for a snack or with chutney for a light meal. Yield: about 15 turnovers.

Recycling Art Is 66 Years Old

The re-cycling of aluminum, considered a new environmental art by conservationists, is in reality more than sixty-six years old. Industry has been gathering and re-cycling the nation's waste aluminum since 1904.

In that year, the U. S. Reduction Company of East Chicago, Ind., first began to take the cast-off portion of aluminum and to melt it down for re-use in manufacturing.

Today a handful of aluminum smelting companies supply more than a fifth of the country's total aluminum needs. In 1971, they will sustain this flow by re-cycling a major slice of an estimated 2 billion pounds of new and old scrap aluminum from the nation's growing scrap pile, equal to more than 14 per cent of the total scrap generated by the country since 1960.

For high efficiency at low cost feed your cows Checkerboard Dairy

You can take advantage of present high milk prices by getting your cows to produce at their bred-in ability—at a low cost. Checkerboard Dairy is the milking ration for the dairyman who wants a highly efficient, yet a low-cost ration for his herd. Checkerboard Dairy has a balance of vitamins, minerals and protein cows need for top performance. And it's a complete milking ration, high in molasses for added palatability and pelleted for easy handling and feeding.

Put your herd on Checkerboard Dairy. See us today—and let Checkerboard Dairy help your cows produce all the milk that's bred into them—and let you take advantage of today's good milk prices.

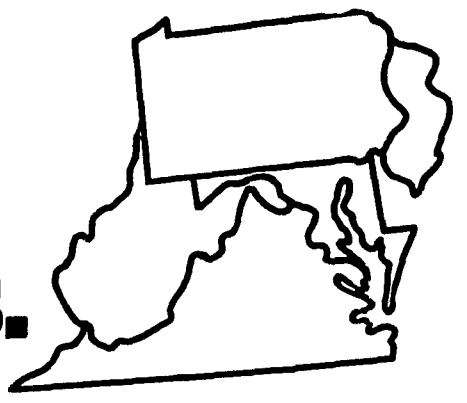
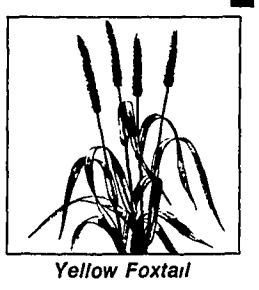
Growers in Pennsylvania and the DelMarVa need weed control alternatives.

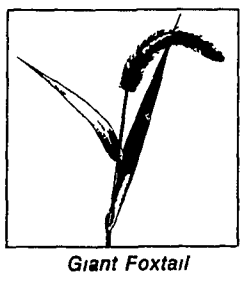


In corn or soybeans if you've got:

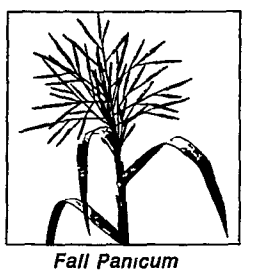


Yellow Foxtail

Green Foxtail

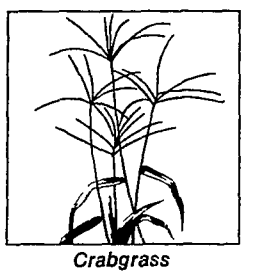


Giant Foxtail



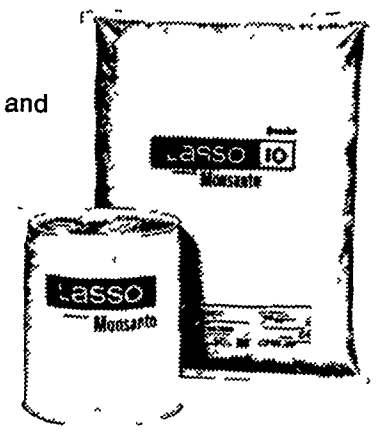
Fall Panicum

Pigweed

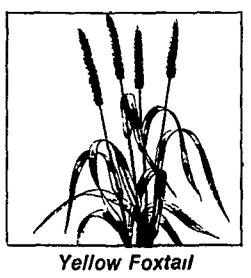


Crabgrass

Use Lasso® by itself—liquid or granules. Lasso controls these annual grasses, broadleaf weed and more . . . with no carryover to harm following crops.

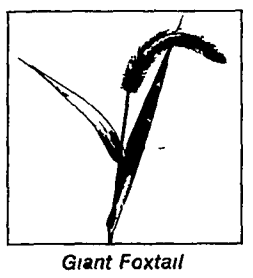


In corn if you've got:

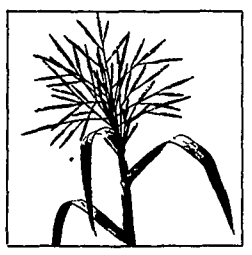


Yellow Foxtail

Green Foxtail

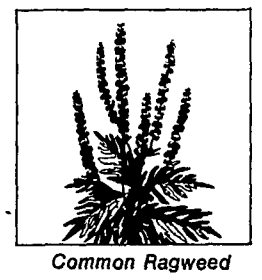


Giant Foxtail

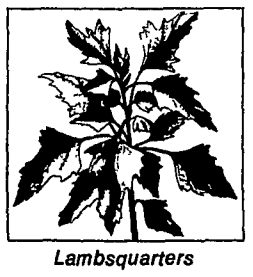


Fall Panicum

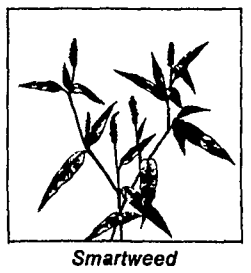
Pigweed



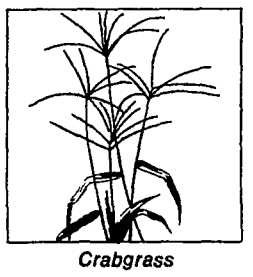
Common Ragweed



Lambsquarters



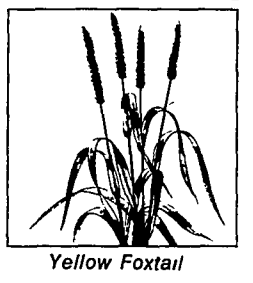
Smartweed



Crabgrass

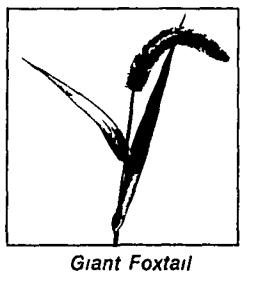
Use Lasso plus atrazine tank mix. Lasso plus atrazine gives you broad spectrum control of the above annual grasses and weeds and you minimize carryover.

In soybeans if you've got:



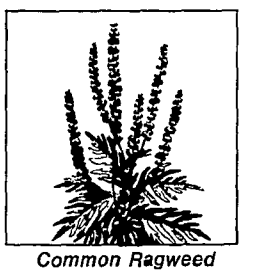
Yellow Foxtail

Green Foxtail

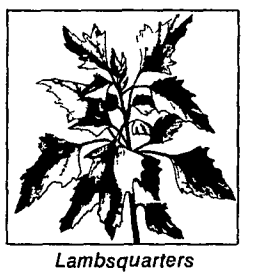


Giant Foxtail

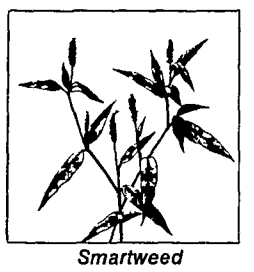
Pigweed



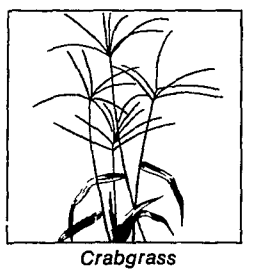
Common Ragweed



Lambsquarters



Smartweed



Crabgrass

Use Lasso plus Lorox* tank mix. Lasso plus Lorox goes on preemergence to control these broadleaves and annual grasses. Both of these herbicides in one tank mix, one trip through the field and your herbicides are there to take care of the weeds before they emerge.

Start with Lasso®... design a weed control program that fits your specific needs.

Lasso®

GIVE PRAISE

Sing Halleluia! Christ is risen . . . and joy fills the hearts of men, lifting our spirits, raising our hopes. The miracle of rebirth surrounds us.

Especially now, at Easter, we long for peace and brotherhood...let's pray for it. And work for it. Together.

Grassroots Opinion

"In an attempt to prepare its readers for the eventual switch to the metric system of weights and measures," reports "News Digest," an Associated Oregon Industries publication, "the Better Business Bureau of California's publication 'Report' calls attention to hearing soon: 'A miss is as good as 1.6 kilometers; there isn't 0.06gram of truth in it; he felt 3.05 meters tall, he was wearing a 455 43 litre hat.' And, in the same line of thinking, those with inferiority complexes might be inclined to hide their lights under 0 363 hectolitres. Experts in metrication have been telling us the new system will take some getting used to "

xxx

Illinois Secretary of State Mike Howlett is quoted as saying,"If God meant us to have a permissive society, He would have given us 10 suggestions instead of 10 Commandments "

xxx

Dr Israel Kirzner, professor of economics at New York University, wrote in an article in the Freeman magazine, "Ultimately in a free market, consumers tend to get what they want The kinds of products produced will reflect the desires of the consumers .Advertised communication is part of the total package produced and made available to consumers The kind of advertising we get reflects the kind of people that we are "

xxx

"Man must live with nature but he has the inteligence to improve on it, to enhance his living circumstances in the total environment, if he will but use wisdom Granted sometimes we do not have that wisdom and overdo things. That is why we are now facing crises in pollution of our biosphere."—Mr. Ellis L. Armstrong, Commissioner, Bureau of Reclamation, U.S. Department of the Interior.

xxx

The Federal Power Commission says this country's shortage of natural gas this winter has been the largest on record, almost twice as large as the deficit last year The gravity of the shortage will depend on how cold it is and for how long. The most vulnerable parts of the country are Southern California and the states east of the Mississippi, according to the Commission.

xxxf

The National Association of Manufacturers has urged both business and labor to "make every effort to live within the voluntary standards" of President Nixon's Phase 111 program for wage and price stabilization This will serve as an important means to the earliest possible elimination of controls, the Association stated Reliance for protection against inflation should be placed on sound government fiscal and monetary policy and on strict limits on federal spending And American industry should unleash a greater effort to increase productivity in the manufacturing and services industries of the nation in order to improve our competitive position both at home and abroad

xxx

It costs millions of millions of dollars a year for government paperwork, according to Representative Keith Sebelius of Kansas He said that in the Office of the National Archives a fulltime worker has been assigned to find out how many federal forms exist. "He is at 700,000 and still counting," the Congressman is quoted as saying in a National Association of Manufacturers editorial.

NOW IS THE TIME . . .

Max Smith
County Agr. Agent
Telephone 394-6851

TO CONSIDER STAGE OF MATURITY

Harvest time is approaching and in a few weeks some forage crops will be ready to cut; usually, the first is winter rye used for silage and will give best results when cut at heading time. By this time next month many of the grasses and, no doubt, some alfalfa and red clover fields will be nearing the bud stage; weather conditions will control the speed of maturity. We urge growers to go by the stage of maturity /and not by the calendar. The Penn State Circular "Silage and Silos" cover the proper time to cut most crops for best feeding values. Stage of maturity is one of the most important factors in quality roughages. Make a special effort to harvest the crop at the right

TO INSPECT LIGHTNING RODS

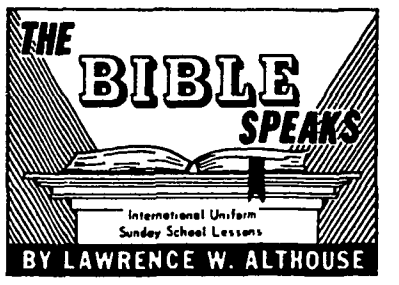
The thunderstorm season is here and buildings with rods should have some protection, if the rods are in good condition. Property owners are urged to go over the rod system and check for breaks and obstacles that would interfere with the conducting of the lightning bolt into the ground. Be sure the rod system is grounded deeply into the moist earth. Some have been broken or pulled out of the ground, and in dry weather a shallow ground may not be sufficient. Lightning rods are regarded as a good investment but should be carefully inspected several times during the summer months.

TO BE CAREFUL WITH MOLDY FEED

We are aware of many cases of mold in stored corn cribs and bins; the moisture content was too high when picked last fall. It is difficult to suggest that unsound corn be fed to any group of animals but fattening cattle and hogs seem to be able to handle it as good as any. Breeding animals of any kind should not get any of the moldy corn or other grain. A number of cases of decreased fertility have been reported that could point to corn with even small amounts of mold being fed to breeding stock. The reproductive cycle is very sensitive so don't tempt fate by taking a chance of feeding moldy grain to breeding stock.

TO PLOW DOWN MANURE PROMPTLY

Whether it be for the sake of reducing air pollution or for the sake of added fertilizer value, it seems a good idea to get the manure incorporated into the topsoil as quickly as possible after it is spread on the fields. As weather permits in the next few weeks, many barns and feedlots will be cleaned out and some complaints of livestock odors may be made. However, this is a vital part of agriculture in this section of the country and with good management and other sanitation practices, no serious charges need to be made. The quicker the manure is plowed down or worked into the soil after spreading, the better it will be for all concerned.



THE EASTER FAITH

Lesson for April 22, 1973

Background Scripture John 11 17-44, 1 Corinthians 15-20-28, 51-57.
Devotional Reading· Psalms 118 15-24

Did you ever stop to think that without Easter there would be no Christmas? What point would there be in joyously celebrating the birth of a man like Jesus unless he did, in fact, conquer death? Without Easter faith, Christmas would, at most, be celebrated like the birthdays of other great men, Washington, Lincoln, Columbus, with banks and post offices closed and the rest of society in the midst of "business-as-usual."

Rev. Althouse

More than a memory

Without Easter there would likely be no Christian Church either. His disciples might have revered the memory of Jesus, but that memory alone would not have been sufficient cause to brave humiliation, hardship, and torture to carry his message throughout the world. The sermon on the mount, the golden rule, the parables of Jesus, none of these would have been worth dying for if it were not for Christ's victory on the first Easter Sunday.

If Jesus were no more than another good man who died a martyr's death, there would be no reason for the world to keep alive his teachings for almost 2,000 years. Some of those teachings are hard to follow and I wouldn't try to practice them at all if I thought that Jesus had really been defeated at Calvary. There are enough sincere failures in this world and I am certainly not going to link my life to another one.

Yes, Paul, writing in 1 Corinthians 15, is right: if there is no resurrection, if Easter is just a fictitous "happy ending," then Christianity is a "pipedream" and we are all wasting our time with the church and the so-called Christian way of life. Cut the resurrection out of the Christian message and the "good news" of Jesus Christ becomes just another sad, old story.

A resurrection faith

This is what Paul is saying in 1 Corinthians 15· "Now I would remind you brethren in what terms I preached to you the gospel . For I delivered to you as of first importance what I also received . . ." The whole heart of the gospel as it was presented to Paul and proclaimed by him was the centrality of Christ's resurrection It was, Paul said, "of first importance "

Paul goes on to make the case in even stronger language:

. . . if Christ has not been raised, then our preaching is in vain and your faith is in vain . . . and you are still in your sins. Then those also who have fallen asleep in Christ have perished. If for this life only we have hoped in Christ, we are of all men most to be pitied. (1 Corinthians 15:14-19).

A noted Biblical scholar, Bernhard Anderson, reminds us that the disciples did not go into the world "preaching an ethical code, or a system of philosophy, or a utopian gospel of social improvement." The Church was then as it must be now: **established on the Easter faith.**

The Farm Land Tax Issue

(Editor's Note: The following article was prepared by a team of Penn State agricultural economists, Donald J. Epp, Peter H. B. Norton and William M. Carroll.)

A referendum on the ballot for the May 15, 1973 primary election, if supported by a majority, will result in an amendment to Pennsylvania Constitution which will authorize the General Assembly to establish standards and qualifications for agriculture reserves and land actively devoted to agricultural use, and make special provision for tht taxation of agricultural land.

Possible Effects On farmers' tax bills.

A study conducted at The Pennsylvania State University examined some possible effects of use-value assessment of farmland on the tax burden of farmers. The study, which was summarized in the October 1972 issue of Farm Economics, lead to the conclusion that in the short-run there will be great variation in impact between counties and between farms within any given county. There were 170 farms studies in 8 different counties of Pennsylvania. The study looked at what would happen to the tax bill of each of these farms if it were assessed according to a hypothetical use-value assessment system, similar to the one used in New Jersey.

If this use-value assessment were introduced for farmland without any changes in the assessment of other properties or any changes in the tax rate, the effect on farms would vary considerably. One farm in the study would pay only 2 percemt of the present tax bill if it were assessed according to agricultural value. Another farm would pay 482 percent more than the present taxes. The average change in the amount of taxes paid per farm ranged from a decrease of about $360 for Bucks County farms to an increase of over $1,000 per farm in Lancaster County. Most of the farms studied in the area near Philadelphia would experience decreases in their taxes, although some did show an increase under the conditions assumed by the study. In other areas of the state most farms would experience an increase in taxes if use-value assessment were used. This indicates that present farmland assessment is below agricultural value in many areas of the Commonwealth.

A more recent analysis of farmland sales in all counties of the Commonwealth in 1970 and 1971 shows that farmland is presently assessed at a smaller percentage of its market value than is residential property in 52 of our 67 counties. Agricultural land is assessed at a significantly lower ratio than commercial property in 45 counties. It seems likely that reassessment in counties such as these would result in increased farmland assessments. In some cases use-value assessment may reduce the taxes paid for farmland after reassessment that would otherwise have an increase in its assessment.

Participation might be voluntary.

If the constitutional amendment is approved, the effect of any Agricultural Use-Value Assessment Act that the legislature might pass would depend on whether use-value assessment was voluntary with the individual farmer or whether it was mandated throughout the Commonwealth. If participation is voluntary, the farmer who sees that his taxes would increase if he participated would be unlikely to join. Another variation that might be considered is that of allowing individual counties to choose whether they participate or not. Those counties where it would be of benefit to a significant number of individuals might participate whereas other counties might delay their participation. The important thing to note is that the effect may vary depending on the type of actual law passed if the amendment is approved.

Agriculture accounts for relatively small share.

For the Commonwealth as a whole, agriculture accounts for over 818-million dollars of real estate assessment - about 4 percent of the total assessed value of taxable properties in the Commonwealth (see Table 1). Thus, even though agriculture is an important industry in Pennsylvania, it accounts for a relatively small portion of the total taxable real estate in the Commonwealth. Residential, commercial, and industrial properties each account for a larger portion of the total base. This percentage varies from one county to another. No county, however, has more than one-third of its assessment in agricultural land. Most of the leading agricultural counties have less than 10 percent of their real estate assessment base in agriculture.

The counties where agricultural use-value assessment might result in lower tax payments for farmers are principally in the Philadelphia area. If the reduced assessment found in the sample of farms in the Penn State study were to hold true for all farms in the county, it is possible to calculate the reduction in property tax base that would result. For the three counties in the Philadelphia area (Bucks, Montgomery, and Chester), such a change would result in a reduction in tax base of less than 1 percent in Montgomery County, about 2 percent in Chester County, and about 3 percent in Bucks County. The variation between townships and school districts within a county may show that some would have a greater reduction in their property tax base while others would have less than the county average. In any case, the amounts involved are relatively small when compared to the total assessment base of the county.

The effect of use-value assessment in reducing the tax base might be even further lessened if the particular assessment procedure passed by the Legislature included a tax roll-back feature. Under these provisions any property that switches from agricultural to non-agricultural use would pay a penalty to the municipality equivalent to the reduction in taxes for a specified number of years, usually somewhere between three and five years. This roll-back tax payment reduces the tax-base reduction that comes about through agricultural use-value assessment. Again, it is very important to note that differences in possible acts that might be enacted by the Legislature makes it difficult to predct an exact effect of such a program.

General conclusions.

It is possible, however, to make some general conclusions on the basis of evidence available. (1) It

Mecadox® CARBADOX
The Super Starter

Questions pork producers are asking about Mecadox; the amazing new feed additive.

Q. What is Mecadox?

A. It is a new swine feed medication that does an outstanding job of promoting growth and controlling scours (dysentery, salmonellosis)

Q..What's so special about it?

A. Mecadox was developed specifically for use in swine by Pfizer research It is unrelated to any medication ever used in animals It's not an antibiotic, sulfa, arsenical or nitrofuran but a new kind of chemotherapeutic compound

Q. Is Mecadox any better than other additives?

A. Yes Mecadox provides bc h superior scours control and more profitable growth, while other single or combination antibacterials fall short on dysentery control or growth

Q..Who says Mecadox is better?

A. More than 100 experiments with over 5,000 pigs Many experiments were conducted by independent feed companies, universities and research veterinarians in pork-producing regions

Q..What kind of results can I look for?

A. Compared to feeding no medication, 30 experiments with more than 1500 pigs show Mecadox at 50 gm /ton improved average daily gains over 21% and feed efficiency by 10 5% Mecadox pigs were an average of 6 2 lbs heavier

The Farm Land Tax Issue

(Continued From Page 11)

seems reasonably clear that presently much of the agricultural land in the Commonwealth is assessed at a value less than its agricultural use-value. The amount of this preference varies from county to county. (2) It is also clear that where the tax base would be reduced from immediate implementation of agricultural use-value assessment (mainly the Philadelphia suburban area) the total effect is likely to be small.

Differential assessment options.

Differential asssessment of farmland, as it is used in this country, comes in many shapes and sizes. It is often divided into three general types. They are preferential assessment, deferred taxation, and restrictive agreements.. The term "differential assessment" denotes all three types collectively.

Under the **preferential assessment** approach, ~~alda~~ devoted to agricultural use is assessed on the basis of its value in agricultural use. Market values reflecting potential uses, such as housing subdivisions or industrial sites, are given little consideration

Opponents of preferential assessment commonly raise several objections. One is that landowners are being given a break in their taxes and little is required of them. To qualify, they usually have to keep the land in agricultural use for the year in question (or more accurately, have it in agricultural use on the assessment date and, perhaps, for two or three years preceding). Furthermore, it is said that non-farmer speculators succeed in getting their land classified as farmland by conducting very minimal farming operations on it. The laws then benefit land speculators more than they do the bona fide farmers.

Under a **deferred tax** law, eligible lands are assessed and taxed on their value in agricultural use, just as under preferential assessment. But when any land assessed under this act passes into nonagricultural uses, a "roll-back" tax is levied. This tax is levied for the year in which the land use changes and several years immediately preceding. It is equal to the amount of tax which was saved, each year, because of the special agricultural assessment.

The effect of a deferred tax provision is to remove some of the financial incentive for an indivdual who is holding land for relatively near-future urban use to apply for the differential assessment. He will save little money. The effect depends, in substantial measure, on the length of the deferred period. A three-year period states having majority of the states having such tax provisions.

An additional advantage claimed for the deferred tax is that is provides additional revenue at the precise time it is needed for new schools, sewer extensions, and other community services.

Both preferential assessment and the deferred tax leave the taxing unit little choice. If the land is in agricultural use, usually it must be assessed on this basis, at least if the owner applies for the assessment. The community may have decided that the farm is in an area where uurban growth should be encouraged, but in most cases it has no alternative to granting financial benefits to those who want to continue farming.

Several states including Pennsylvania have met this problem by legislation which allows the county government and the landowner to enter into a voluntary agreement under which the landowner agrees to keep his land in agricultural or open-space use for a period of five or ten years (Act 515 as amended). In return he is granted assessment on that basis.

Differential assessment and the preservation of open space.

Differential assessment laws have been passed in various states for a variety of reasons, but one of the more common reasons is the suggestion that these laws will provide for the preservation of open space.

To evaluate these laws, there is a need to look at several questions. First, we must decide what kinds of land use we are trying to preserve. Then we need to ask whether differential assessment can produce the results wanted because nearly

Wheat Program Reaches Second Highest on Record

The 1,033,019 farms signed up to participate in the 1973 wheat program number is only 4,716 fewer than the record 1,037,735 farms which were enrolled in the 1971 wheat program, according to a final signup report issued by the U.S. Department of Agriculture.

Farms signed up for this year's wheat program represent 79 percent of the 1,313,392 total eligible wheat farms and are 36,261 more than the 996,758 farms enrolled in 1972.

The 1,033,019 farms have allotments totaling 17,439,089 acres, 94 percent of the 18,470,370 eligible allotment.

The regular signup period was Feb. 5-March 16. However, in counties where signup activity was heavy on the final day a register was arranged so producers could indicate intentions to participate. This report includes these later enrollments.

Participants in the 1973 wheat program were not required to set-aside land. However, those who elected to set-aside acreage voluntarily for additional payment needed to set-aside an amount equal to 86 percent of their allotments in addition to the voluntary acreage (up to 150 percent of the allotment). Of the 1,033,019 farms included in this final report, 893,538 farms have signed up with no set-aside and 139,481 have elected to set-aside a total of 7,238,532 acres of which 3,792,554 acres is additional set-aside . Payment rates for the voluntary added set-aside will be 88 cents per bushel times the farm's established yield times the acreage voluntarily set-aside.

Silver Spurs Club Sets Show Date

The April meeting of the Silver Spurs 4-H Club was held recently at the Baker residence. Thirty-seven members attended. The president opened the meeting. Roll was taken, and dues paid. There was no old business.

New business included choosing a date for the Club showmanship show in preparation for the 4-H County Roundup. June 26 was decided on with Juniors showing at 7 p.m. and Seniors at 8 p.m. It will be held at Manor View Acres in Washington Boro.

A date for the open horse and pony show to be held at the Lancaster Riding and Tennis Club on Columbia Avenue was discussed. Members will be allowed to show their horses. The tentative date is July 22, the day after the 4-H County Roundup.

It was announced that two members attended the State Capitol Days in Harrisburg. They were Randy Glick, president, and Rick Rehm. One Senior member, Randy Glick, will participate on the judging team., and several Junior members will attend the clinics.

After the business meeting demonstrations were given by Sue Baker (bits) and Wylie Baker (horse products). A report was given by Dana Gottloeb on the Tennessee Walking Horse.

The May meeting will be held at Manor View Acres on May 4 at 7 p.m.

Outlook

RED MEAT REPORT... Heavy demand and high prices seem to be encouraging larger red meat production this year than last. The red beef boom continues: 1973 output will be moderately ahead of last year's record. Pork production will probably equal 1972 as second half gains offset first half cuts. xxx

BEEF DETAILS...Spring fed cattle marketings will probably be up...but only slightly...from April-June 1972. Latest inventory (January 1) showed 9 percent more cattle in feedlots in the weight groups that typically supply over half of spring slaughter. But some of these cattle won't make it to market. Severe storms in the Southwest and Midwest during early winter boosted death losses and slowed weight gains xxx

FEEDER CATTLE PLACEMENTS UP...The inventory January 1 showed more animals suitable for first half feeding and, with demand for fed beef staying strong, producers will porbably up January-June placements on feed from the same 1972 period. That'll mean largersecondhalf marketings...and some possible price slippage later in the year.

MARGIN ALERT...With feeder cattle prices soaring during 1972, feedlot operators have been selling fed cattle at a lower price per pound than the animals cost as feeders several months before. These "negative margins" are expected to continue in 1973...and could spell trouble when the fed cattle market weakens. xxx

TURNING TO PORK...The latest hog production cycle seems to have bottomed out, but it'll be a while...at least midyear... before slaughter starts to pick up. First half marketings will trail a year ago, reflecting the smaller number of market hogs on farms. Second half marketings depend on the size of the December-May pig crop...and farmers have indicated they'll boost farrowings during this period by 7 percent over the same months a year earlier. xxx

. PRICE PATTERNS...Look for a return to normalcy this year rather than the contraseasonal runups in hog prices we've had during the past two autumns. On balance it looks as if 1973 price patterns will duplicate the 1970 situation when barrows and gilts averaged $28 per 100 pounds in February...weakened in the spring...recovered to $27 in the summer...then dropped sharply in the fall. One difference: This year's general price decline probably won't be as sharp as 1970's. xxx

..SECOND HALF OUTLOOK...-Pork producers will probably continue in the second half of 1973 the expansion in farrowings now underway. While hog prices will soften during the year...especially the fall...corn prices should also go down some and feeding ratios should stay favorable. Given larger farrowings this fall, 1974 port supplies would be up from this year.

LAYER LOW...The laying flock at 1973's start was down 7 percent from a year earlier. As we move through the year flock size will stabilize...then begin growing as producers hold layers longer and force molt more birds. High egg prices, too, will encourage farmers to cull fewer birds than they did in the winter and spring of 1972. xxx

EGG OUTPUT AND PRICES...Egg output this year will probably be under 1972...the small flock size will offset higher productivity. But fewer eggs will mean firmer prices. For the year they'll probably be well above the low 1972 levels. xxx

BROILER BOOM OVER?...Strong prices during the winter apparently weren't quite enough to encourage broiler producers to expand output in face of sharply higher feed ingredient prices and uncertainty about future feed costs. Chick placements during the winter droppedunder a year earlier...the first such falloff since late 1971... and what happens during spring and summer depends largely on the feed situation xxx

BROILER PRICES in 1973 will be buoyed by continued gains in consumer disposable incomes, higher employment levels, and good prices for other high-protein foods. Spring and summer prices are likely to remain well above 1972 levels...fall, though, should see some weakening as the birds face stronger competition from larger pork supplies that will be reaching markets.

Dirty Light Bulbs

If your house lights are dim, it may mean dirty light bulbs. Extension home management specialists at The Pennsylvania State University suggest dusting light bulbs regularly with a soft cloth or vacuum brush. If necessary, they should be washed with a damp sudsy cloth and thoroughly dried. When cleaning with a damp cloth, prevent shock by taking the bulbs out of their sockets.

CONTROL WEEDS IN ALFALFA WITH

BUTYRAC-118

Apply 2 to 4 weeks after alfalfa emerges. Controls broadleaf weeds in seedling or established legumes. This remarkable selective action — killing many broadleaf weeds without affecting certain broadleaf crops — has been proven by research men and commercial growers throughout the country.

We are distributors for a complete line of

WEED KILLERS

Who Speaks up for the Dairy Farmer? EASTERN MILK PRODUCERS

The pursuit of truth is a full-time job at Eastern. It's vital for both the consumer and the legislator to know the truth about what we're most concerned with . . . *milk*.

Recent example: The U. S. Department of Agriculture announced that the cost of food per person had risen $64 in 1972. And that $59 of that amount went to the farmer. Eastern put the issue into true perspective. We replied with facts and figures. Farmers did not receive that money.

Dairy farm income has decreased about 2% per year over the past three years. Last year dairymen paid *increases* for feed, gasoline and machinery far in excess of $64 for any of these items. For an average dairy herd, feed costs rose about $2,000 in 1972. Moreover, only $.16 of every disposable income dollar today in the U. S. goes for food, including milk . . . the lowest in this country's history. (Compare this with the 50% the Russians pay.)

The need for a "Cost of Production Council", as a counterpart to the present "Cost of Living Council", becomes increasingly apparent, if any form of equality is to exist between producers of food and other segments of our economy.

Eastern members have been paid more money with higher milk checks than have members of any other major cooperative in the Northeast, but we must strive to obtain price improvement to offset rising production costs.

The dairy farmer is offered the opportunity "to make his voice heard through Eastern". Join the 9,000 dairymen now working toward market stability at a profit. You need us. We need you. See your local Eastern representative.

EASTERN MILK PRODUCERS COOPERATIVE ASSOCIATION, INC.

Eggs - A Good Nutrition Buy

Today's housewife may not realize it, but she's getting a better buy in eggs than her mother experienced, according to Dr. Gene C. Masters, Executive Vice President of United Egg Producers, an Atlanta based national egg marketing cooperative.

"Eggs are more economical today and consumers have more money to spend than in the 1950's," Dr. Masters said. "Most of today's young homemakers were children or teenagers in the '50s so they didn't realize what a problem their mothers had in stretching the food dollar."

Another thing food planners do not take into consideration is the fact that eggs are the cheapest source of high protein in the supermarket today, Masters said. At today's prices eggs are an excellent protein substitute for high priced meats. A dozen large eggs (minimum 24 oz. by government regulation) selling for 75 cents per dozen are really 50 cents per pound.

Disposable consumer income has increased on a steady scale since 1950 while egg prices have erratically declined during the period, Dr. Masters pointed. In 1950 when the annual per capita disposable income was under $1,400, large shell eggs averaged 60.4 cents per dozen. In 1972, when per capita disposable consumer income passed $3,800 the annual average price for shell eggs had declined to 52.4 cents per dozen. Highest annual average prices in recent years for shell eggs was in 1970 wwhen the prices reached 61.4 cents per dozen, a 2 percent increase over the prices of 20 years before while consumer disposable incomes advanced 136 percent.

"One must conclude that eggs are not contributing significantly to the increase in the consumer's food budget," Dr. Masters said. "Certainly, today's egg prices are higher than a year ago, but consumers enjoyed two years of severely depressed egg prices caused by over production to which the egg industry is now adjusting."

Dr. Masters estimates 1973 annual retail prices for large eggs will average between 65 cents and 70 cents with seasonal variations. At the same time, the annual per capita disposable income in 1973 is projected to reach over $4,000, a 21 percent increase from 1970. Retail egg prices this year are projected to be up from 6 percent to 14 percent from the 1970 level. Very few retail food items will reflect such a modest gain in the same three-year period, and almost no other food can compare to eggs as a bargain for the housewife, Dr. Masters concluded.

Help Us Serve You

Don't assume we know about your farm organization's meeting. To get your meeting on our Farm Calendar, it's safer to assume we don't know.

Remind us by calling 394-3047 or 626-2191 or by writing to Lancaster Farming, 22 E. Main St., Lititz, Pa. 17543. You'll be helping us to serve you better.

Pa. Soil Map Available

Locations and descriptions of 153 soil groups in Pennsylvania are available at an educational, non-profit cost of $3.00 in the Land Resources Map of the Commonwealth, published by the Agricultural Experiment Station at The Pennsylvania State University.

Presenting land resources in graphic form, the map is unlike anything published previously for Pennsylvania. It brings together factors of soil depth, drainage, available moisture, and productive capacities of soils.

The map has already been used widely by industrial and community planners, Penn State officials report. High school and college teachers find it helpful in studying earth sciences. It was developed by Howard W. Higbee, professor emeritus of soil science, who considers it vital for soil and water resource managers.

Multiple patterns and colors are used to portray the 153 soil groups—coded and symbolized for identification. Each soil unit or group is evaluated by 16 characteristics. The more important characteristics are depth, soil drainage environment, geological source of soil material, available moisture, plant rooting zones, and dominant crop production.

Copies are available for the $3.00, plus 18 cents state sales tax, from Land Resources Map, Box 6000, University Park, Pa. 16802. Make check or money order payable to The Pennsylvania State University. The map may also be purchased directly in room 232 of the Agricultural Administration Building at University Park. The office is open from 8 a.m. to 5 p.m., Monday through Friday.

Plant Could Reclaim Acid Mine Waters

A plant that grows like wildfire in acid water is being groomed to ignite a chain of life in acid streams.

Scientists at The Pennsylvania State University believe it might help rehabilitate some of the 6000 miles of U.S. waterways that have become flowing deserts as a result of acid mine drainage.

Game fishing in acid streams may even be an outcome.

The plant, a bright-green reed, is a relative of the Biblical papyrus. It has been observed in acid streams in mats as large as a putting green and almost as pure.

"In most of these underwater oases," says Dr. Richard Wagner, assistant professor of botany at Penn State, "not one weed is to be found in a whole colony of **Eleocharis acicularis.** For even weeds will not grow in acid water."

But Eleocharis (pronounced: eely-occris, also called a needle rush) does grow. Why it grows is still a mystery, but Wagner and graduate assistant Paul Rothrock have now established at least one of its requirements: lazy water.

"Eleocharis," says Rothrock, "is found only in quiet pools, backwash areas, or where there is only a slight downhill grade to a streambed."

Hurricane Agnes undoubtedly wiped out flourishing underwater swards of this plant, and each winter ice floes take their toll. But the plant has a remarkable ability to spring back to life. Its seeds germinate with extreme rapidity.

"In the laboratory," says Wagner, "we have seen shoots emerge from seed in less than a week."

Wagner believes the plant might be used as a starter crop, a base on which micro-organisms, algae, and insects might take hold.

"Ultimately," says Wagner, "these might serve as food for certain acid-tolerant fish, such as the black bullhead."

Wagners idea is that an Eleocharis population explosion might be systematically fostered in acid streams. The plant does lend itself to transplantation:

"Divots removed from a mat easily take hold if replanted where conditions are favorable," reports Rothrock. And the Penn State studies have shown the needle rush to be adaptable to extremes of both cold and heat.

An earlier study at Penn State by graduate student John Kroh (1970) showed that Eleocharis flourished in acid streams for the very reason that most other living things do not: strip mining upstream, where acids are generated, also generates large amounts of silt.

This fine sediment is apparently required by Eleocharis as a growing base.

Like deserts, acid streams are popularly supposed to be sterile.

The supposition in both cases is incorrect. Though not exactly teeming with life, acidic streams do contain certain species of living things:

In 1939, some thirty-eight species of micro-organisms were identified by a West Virginia scientist as residents of acid waters.

One bacterium that actually feeds on acid is being used by Penn State mine drainage experts to remove acid from the water.

Several plants, the burr reed, for one, are found in scattered stands on acid streams, as are various forms of algae.

In addition to the black bullhead, the sunfish, white sucker and creek chubb have been known to inhabit acid streams.

So, the ingredients of a food chain are there. If large carpets of Eleocharis could be cultivated in quiet places on a stream those ingredients might come together and provide a kind of granary for game fi

"Thi .esearch," cautions Wagne. 'should not lull anyone into a false sense of security about acid mine drainage. Steps still need to be taken in mining operations to prevent such drainage from forming, and chemical and other techniques need to be used on-stream to neutralize acids.

"But partial rehabilitation by plants like Eleocharis is a possibility, and the scope of acid mine drainage–in Pennsylvania alone four and a half billion gallons of acid water is generated every day–is such that we can't afford to ignore any possibility."

One bonus from Eleocharis has already been observed, at least by Paul Rothrock.

"To come upon a backwash where orangy-red-stained rock provides the backdrop for a lush carpet of lime-green vegetation is a breathtaking experience, and one you can't expect to find anywhere but in an acid stream."

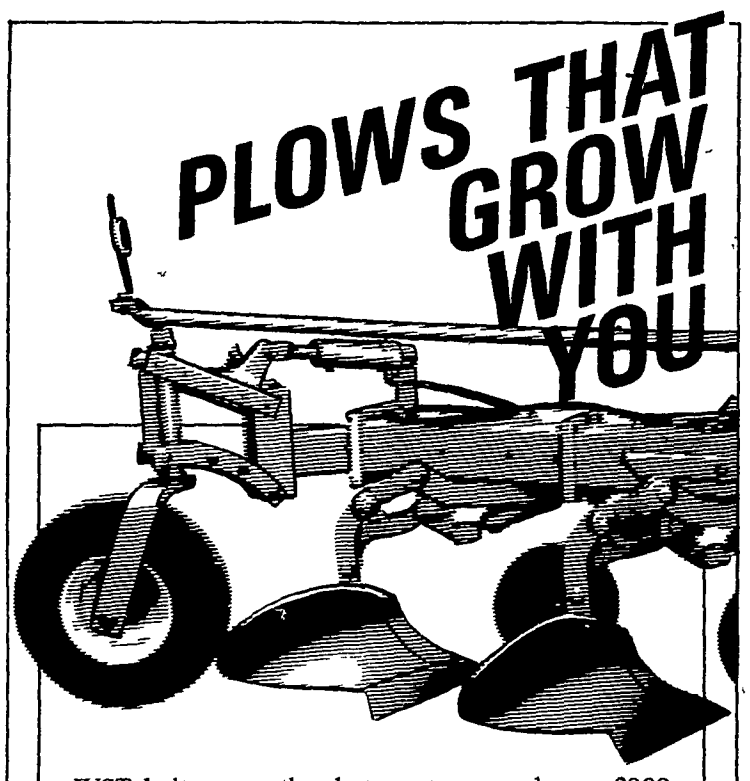
PLOWS THAT GROW WITH YOU


JUST bolt on another bottom to expand your 2000 Series Allis-Chalmers *Monoframe* plow. No need to buy another plow when you buy a bigger tractor. And that's just one of the many fine features of these rugged semi-mounted plows. There are no cross-braces to get in your way when you want to adjust a coulter or change a plow blade. The frame is clean and wide-open so you can walk right up to any point on the plow.
Plus, you have a choice of shear bolt, spring trip or hydraulic reset stub beams and a complete selection of coulters and bottoms to match soil conditions.
These *Monoframe* plows come in a 4-bottom size that can be expanded to 5, and a 5-bottom size that can be expanded to 6. Come and take a look at them. You'll see why Going Orange is Going Great.

FFA Members Honored For Recordkeeping Abilities

Each year, the Production Credit Association recognizes members of the Future Farmers of America for doing an outstanding job of keeping records on projects carried as part of the vocational agriculture program.

Selection of eligible record books is done on the chapter level, district level, and state level. Grading in the chapter is done by the vocational agriculture teachers, while grading for district and state awards is reviewed by county and state officials along with a representative from Production Credit.

Monetary prizes are awarded by Production Credit to winners in each category. Chapter winners receive $25, district $50, and state $200.

The state winner this year was Robin Ginder, a member of the Cloister FFA Chapter at Ephrata. Ginder received his check from Robert Zook, local Production Credit representative.

The winner of the district award was Dale Maulfair, a member of the Northern Lebanon FFA Chapter. He accepted his award from Chester Singley of the Production Credit office.

John Miller, Manheim FFA Chapter, received the county award. This award was presented by Charles Schreiber.

All awards were presented to winners at the annual Parent-Member FFA Banquets of the home Chapters.

Other area winners were: Jake Leiby and Thomas Heffner, Hamburg FFA, Berks-Lehigh Valley Production Credit Association; Jeffrey Werner, Northern Lebanon FFA, Lancaster Production Credit Association; Joseph Sheffer, South Western FFA, York Production Credit Association; Chris Herd and Gerald Metzler, Octorara FFA, Norristown Production Credit Association.

Robert Zook (left) of the Lancaster Production Credit office presented a plaque and $200 for the State Production Credit award to Robin Ginder, son of Mr. and Mrs. Ira Ginder, Denver RD2.

John Miller, a member of the Manheim FFA Chapter, displays the certificate he received for winning the county Production Credit award.

James Grosh, left, assistant manager of the Lebanon Farm Credit Office, presented an award to Kenneth Fahnestock at the annual Chapter banquet.

Soybean Management Tips

By Raymond A. Krause
Plant Pathology Extension
Penn State

In order to supply growers with certified soybean seed this year, several soybean seed producing states have lowered the minimum germination requirement for certified seed to 70 percent. This means that you may need to increase your planting rate accordingly. For example, at a soybean workshop in Lafayette, Indiana, a test of recently harvested soybeans showed only one-fourth had 80 percent germination, half tested between 60 and 79 percent, and the remaining one-fourth tested below 60 percent germination!

Due to high cost of soybean seed and lower germination, this is the year to use seed treatment with a fungicide and-or an insecticide to help prevent seed decay, damping-off, and maggot injury. If both seed treatment and soil inoculation (planting on ground where soybeans have not been planted before) are required, it is considered best to treat the seed several weeks before applying the inoculant. See the Agronomy Guide for additional information on seed treatment.

We recommend that all seed germination be tested. Increase your planting rate to offset low germination. A "Do It Yourself" germination test is included. DO IT!!

It is important that soybean producers consider disease prevention before planting. After seeds are planted, it is too late for most disease control practices. Seed and-or soil treatment with various plant health products (fungicides, insecticides, etc.), disease-free seed, disease resistant varieties, disease preventing crop rotations, and plowing under crop refuse are commonly employed as preventive management practices to improve health of soybeans. The proper combination of soybean health-promoting practices for an individual grower will depend to a great extent on the diseases that have been a problem in the field under consideration. It is known that disease problems can vary from field to field even on the same farm.

Growers are advised to contact local or State authorities for localized information on slybean diseases and their control.

How to Run a "Do It Yourself" Cold Test for Determining Soybean Seed Viability

The standard seed laboratory germination test does not provide an accurate criterion for soybean seed viability in the field.

The "cold test" for seedling emergence is a more accurate method of finding out what seeds will do when planted in the field.

Here is how to run a cold test:

1. Count out three (3) 100 seed samples selecting seeds free of cracks, splits, mold and discoloration.
2. Layer each 100 seed sample in a large Dixie Cup or drinking glass alternating a layer of seeds with a layer of field soil.
3. Moisten layered seed samples and store for 7 days at approximately 50 degrees (garage, tool shed or outside building temperature).
4. Plant cold treated seed in flats or baking pans of ordinary sand. Plant 100 seeds in 5 rows of 20 seeds.
5. Moisten planted beans, place in a room at 70-80 degrees (the living room is a good place if you can get away with it).
6. Water daily and start counts of emergence after 4 days, check on 5th, 6th, 7th days and record percentage emergence.
7. Average the three 100 seed samples and this is the percentage emergence you can expect to get in the field.
8. A good seed sample should give no less than 70 percent emergence in cold test. This should give 80-90 percent emergence in the field.

Give Your Cattle the Pasture They Prefer–

988

Sorghum-Sudangrass Hybrid from PIONEER

Strip tests prove it: Cattle prefer Pioneer brand sorghum-sudangrass hybrid over other brands. That means they'll eat more . . . . make more meat or milk. Unbeatable hot-weather pasture or green-chop. Can be planted on diverted acres and grazed after September 1. Treat your cattle to the pasture hybrid they like best!

Thoughts in Passing

Parliamentary Procedure and Meetings

The agenda includes different types of reports and their approval. Numerous types of motions are also employed. The main motion is used to introduce a new item of business. Then, there are more than 40 other motions that can be applied to the main motion or come on the floor during the discussion of the main motion. It is at this point that parliamentary procedure gets extremely interesting, but very necessary in maintaining an efficient and democratic business meeting.

There are a group of subsidiary motions that control the content of the motions currently on the floor. They are: postpone indefinitely; amend, and refer to a committee.

Charles Ackley

There are also subsidiary motions that control the content of the proceeding motion. These motions postpone the matter to a set time, limit debate, close debate, or lay the item on the table.

A group of privileged motions serve as the traffic police of parliamentary discussion. It includes call for the orders of the day to remind the chairman to follow the order of agenda. Other motions in this category include raising a question of privilege, take a recess, and adjourn.

Return motions are employed to return a proposal to the floor for further consideration. They are to take from the table, reconsider, rescind, and renew.

Incidental motions are an assortment of miscellaneous motions designed to handle situations not mentioned previously. These include requests for information, point of order challenging a chairman's decision, appeal, division of the assembly calling for a counting vote, suspend the rules, and objection to consideration.

Many details concerning these motions and other parliamentary procedures have not been discussed. The vote required and procedures for handling these motions should be obtained in more detail

In summary, always remember that the main business of a business meeting is business, not practice in the technicalities of parliamentary law. Use as much of the parliamentary code as the situation requires, but no more. The purpose of parliamentary procedure is to serve the chairman and his organization in conducting a successful business meeting.

Start the meeting on time with a previously well-planned agenda. Conduct an efficient and democratic meeting by employing a basic knowledge of parliamentary procedure.

Charles Ackley
Young Farmer Advisor
Ephrata High School

The satisfaction that comes from doing a good job of farming

It's a great feeling to know that you are the master of your farmlands . . . that when you treat your soil right, it will treat you right. Liming is one of the most important factors in keeping your soil in the highest productive range. A good pasture with a pH of 6.5 or higher, for example, will make 300 to 400 lbs. of beef per acre and produce up to $100 gross income per acre. This means with the help of lime, profits from pastures can compare favorably with feed or grain crops.

Martin's Limestone

BANQUET from the GRILL

Directions For Cooking Turkey On A Kettle-type Covered Grill

TO THAW Follow the directions on the turkey bag.

TO PREPARE GRILL Open all dampers on grill and cover. Leave open during cooking. Make a drip pan using a double thickness of heavy duty foil. Put on bottom rack. Place 25 to 30 briquettes on each side of drip pan. Light briquettes and burn 15 to 20 minutes or until white in color. Place top rack inside of kettle over coals with handles opposite those on grill.

TO PREPARE TURKEY Free legs and tail from tucked position of thawed Butterball Swift's Premium Turkey. Remove neck and giblets from main cavities. Rinse turkey and drain. Fasten wings behind back by twisting the wing tips. Do not stuff. Stuffing can be baked in a foil poke or disposable foil pan on the grill beside the turkey during the last hour of cooking. Draw skin over neck. Return legs and tail to tucked position. Brush skin of turkey with oil or melted fat. Insert roast meat thermometer into the center of the thickest portion of the thigh next to the body cavity, not touching bone.

TO COOK UNSTUFFED TURKEY Place thawed unstuffed turkey on top rack Cover with top of grill. To maintain constant heat, add 4 to 5 briquettes to both sides each additional hour of cooking. Check for doneness after 2½ hours of cooking for 12 to 14 pound turkey. Before removing the turkey from the grill, check to be sure the thermometer has not been displaced. The internal temperature of the roasted turkey should be 180° to 185° F

Protect thumb and forefinger with paper or cloth. Pinch the thickest portion of the thigh. The meat should feel soft.

Preparation for Table Use

Vegetables, except corn-on-the-cob, do not need to be completely thawed prior to cooking. The frozen product is placed in a minimum of boiling water, broken up, covered then cooked until tender. The cooking time is usually less than for fresh raw vegetables. Corn-on-the-cob should be completely thawed before cooking. Vegetables that have been frozen in 2 per cent brine solution do not need additional salt and water for cooking.

Timetable for Blanching Vegetables

Asparagus 4 min.
Beans (string or waxed) 3 min.
Lima Beans 4 min.
Beets, cook until tender
Broccoli, 3 min.
Brussel Sprouts 4 min.
Carrots 3½ min.
Cauliflower 3 min.
Corn (off cob) 4½ min.
Corn (on cob) 7 to 11 min.
Eggplant 4¼ min.
Parsnips 3½ min.
Peas 1½ to 2 min.
Peppers 2½ min.
Pumpkin. Cook until tender.
Spinach (and other greens) 2 min.
Squash. Cook until tender.

Combine Frozen Vegetables

You can often use up part packages of frozen vegetables by combining them.

For example—try kernel corn with green beans for a change from succotash.

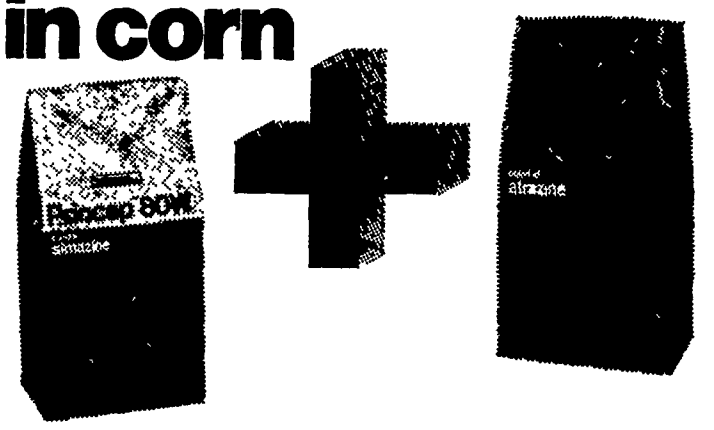
Combine kernel corn and broccoli for a vegetable that looks attractive, tastes wonderful.

Or saute together in a frying pan equal amounts of frozen French-fried potatoes and kernel corn, adding a little chopped green pepper and frozen chopped onion.

CREAMED ONIONS ARE EASY FARE

Sure you can take all of the ingredients and make your own dish full of creamy onions. You know how. Just get the cheese, the salt, the butter and the little onions all ready, then put them together and cook till they are mouth-watering good. BUT THEN you can do the same thing in just a couple of minutes without any mess when you purchase frozen creamed onions; and they will always turn out exactly the same way every time.

Best answer yet to fall panicum and crabgrass in corn



Add Princep® herbicide to your AAtrex® spray. Mix in a one-to-one ratio, and apply at the same rate as AAtrex alone. Controls fall panicum, crabgrass, and other fall grasses. Gets the early weeds, too. And, it costs less than other combinations.

See us. We've got the details.

VORIS
HIGH YIELD SEED CORN

V2642 - 119 day maturity
A Champion. Short-stalked, upright leaf, with a really high yield and potential. Moderately high population

V2592 - 118 day maturity
By demand. A special hybrid for the East, large-eared, excellent stalk, and fast drying.

V2552 - 113 day maturity
This is a high population hybrid. Pour on the fertilizer, early tasseling and silking a high yielder.

V2402 - 102 day maturity
The big yielder. Tough to beat anywhere. Indiana reports over 200 bushels yield. Early plant hybrid.

V2332 - 94 day maturity
Tremendous yield potential. Early. Fast drying. High yielder. Picks and shells beautifully.

The Farm Land Tax

(Continued From Page 12)

any tax program does things that are difficult to anticipate. Our third consideration is whether there will be any undesirable "side effects."

Consider, for example, the goal of keeping open space. Open space has different meanings in different situations. It may mean farms, recreational areas, parks, golf courses, and similar land uses. Open space may be a tool for forcing expansion into certain patterns and densities or it may be areas, such as marshes, which have a particularly valuable ecological role.

If the goal is recreation, perhaps the tax preference should be confined to recreation areas. If the goal is channeling urban development, then it may make sense to offer tax preferences to owners of land in those areas where we do not want urban development, if they agree not to permit such development. If we want to preserve land with particular ecological values, we might offer special tax concessions to the owners of the land, conditioned on the owners keeping the land in uses which are consistent with its ecological role.

The effects of differential assessment laws on land use are hard to predict. People own land for a large variety of reasons; some of these reasons are more sensitive to tax costs than others. For example, if all the owners of farms in this state were studied, you would find some for whom farming was a way of life, some in farming to make money who will stay only as long as they can make a profit, others who are in farming primarily because of income tax advantages, and still others who are mainly interested in speculating in land and will sell to the first buyer who offers the right price. Each of these groups will probably react differently to a change in property taxes. For exxample, if the land you want to keep in farm use is primarily in the hands of speculators, a change in the property tax is not likely to affect their decision.

Another factor involved is the value of the land for alternative uses. If the land is nearly as valuable in farming as for other uses, offers from potential non-farm users will be at comparatively small premiums over farm values, and differential assessment may have an effect. But if that land would provide substantial profits in another use, the offers for it will be higher. Tax reduction may not loom very large in a land-owner's thinking when the offer is everal times the value of the land for farming.

Social equity is one of the reasons usually advanced for differential assessment. Proponents argue that differential assessment is needed because farm incomes are low in relation to the property taxes levied on farmers. Hence, it is said, property tax levies are out of proportion to farmers' ability to pay.

This view, like most, has several sides. It is difficult to define ability to pay taxes. Some people would say, though, that an individual's wealth also affects his ability to pay. Some farmers own valuable land on the rural-urban fringes, and this wealth should be taken into account when costs of government are distributed among citizens.

Furthermore, other citizens on the rural-urban fringe pay taxes out of proportion to their incomes. If farmers' taxes are lowered, it will be necessary to raise taxes on others in order to provide the same revenue. This will tend to intensify the differences among other taxpayers in the same school district and local government taxing unit.

Some say that the farmer's lack of income is partly an illusion. He often lacks cash income, but his net worth often has gone up substantially each year as a result of rising land prices.

Differential assessment often is justified, too, on the grounds that the farmer pays property taxes entirely out of proportion to the benefits he receives from local government. Opponents say that this is true of many other groups of suburban residents, and that lowering the farmers' taxes will only compound the problems of some of the other residents. Some people will go a step further, and say that the property tax correlates too poorly with ability to pay and with benefits received, that it should be replaced entirely or greatly de-emphasized as a source of local finance - especially for schools.

Whether differential assessment is more equitable than other forms of assessment involves individual value judgments.

Attitudes about taxes differ among individuals. Given the same information, analyses, and scientific conclusions, individuals arrive at different conclusions with regard to which tax policies are desirable.

New for soybeans.
MALORAN.
Right in line with your needs today for a combination of herbicides.

Maloran® for soybeans controls most annual broadleaf weeds. That's why it fits so well in a tank-mix combination with Lasso® herbicide.

Besides velvetleaf, Maloran gives effective control of smartweed, lambsquarters, ragweed, pigweed and others. Real problems in your beans.

Maloran also helps Lasso with grass control. On grasses like giant, green and yellow foxtail, fall panicum, barnyardgrass and other annual grasses.

And since you're handling more acres today, with probably no more help, this is the kind of control you need.

There's more information you'll want and should have about Maloran-Lasso. So you'll know how it will fit your soils, weed and grass infestations, and your farming practices. Talk to your supplier.

Agricultural Division, CIBA-GEIGY Corporation, Ardsley, N.Y. 10502.

CIBA–GEIGY

Lasso® is a trademark of Monsanto Company.

SERVING A CROWD?
CASSEROLES

It is no wonder most cooks love casseroles. They're fast to fix.

Make most of the meal and let your oven take over while you make the salad and set the table.

What about desserts - no more worry - serve an assortment of delectable Shortcakes

Pieces of lemon, cherry, blueberry, pineapple, peach and, of course, strawberry.

Let everyone choose their favorite and they will certainly come back for seconds - a perfect ending for a party buffet, a family dinner, a late night snack or a bridge luncheon.

Next time you are having a crowd serve this tasty menu and top it all off with Shortcakes for dessert.

Ham - Chicken Bake - it's brimming with chunks of meat in a creamy full-flavored sauce.

It's fancy and fast

HAM CHICKEN BAKE

- Cook 1½ cups each, chopped onion and celery in ¾ cup butter until tender.
- Blend in ¾ cup of flour, then stir in 4½ cups chicken broth and light cream or milk.
- Cook and stir until sauce comes to a boil.
- Add 6 cups each - cooked, diced ham and chicken and 2 cups sliced mushrooms.
- Season with 1 teaspoon poultry seasoning
  1 teaspoon salt
  1 teaspoon pepper
- Place in large casserole and bake in 350° F. oven until hot.
- Top with biscuits and bake until biscuits are done.

Serve with fresh relishes and Shortcake dessert.

A ready crowd pleaser.

Yield: 24 servings.

MARINATED TOMATOES

8 whole medium-sized tomatoes
½ cup olive oil or salad oil
2 tablespoons fresh lemon juice
2 tablespoons wine vinegar
2 tablespoons thinly sliced green onions
1 tablespoon finely chopped fresh parsley
1 teaspoon dill weed
½ teaspoon salt
Freshly ground pepper
Bibb lettuce

Blanch tomatoes in boiling water for 30 seconds. Slip off skins. Place tomatoes in a shallow dish. Combine oil, lemon juice, vinegar, onions, parsley and seasonings. Pour over tomatoes. Cover. Place in refrigerator over night or for several hours to chill thoroughly. Serve individual tomatoes on Bibb lettuce surrounding Chilled Macaroni Salad.

Yield: 8 servings

it's a woman's WHIRL

by MARY LEE

Remodeling an old home is a project to enter into with caution if you want to emerge with joy. The trick is to proceed slowly, bone up on remodeling, choose a contractor carefully, insist on quality, and check all work as it progresses. Then you're more apt to be house-proud when the work is finished.

Actually there are many good reasons for remodeling an older house. It often has sturdy basic construction on which to modernize, and the value of the property will be enhanced. It's also less expensive to build an addition or make improvements than to build a new house. And you can stay in your own familiar neighborhood without disrupting the entire family.

Of course, there'll be moments when you wished you hadn't tackled the project. About the time the plumber drives over your new young shrubs, the family has eaten out three days in a row, the cat has disappeared, and the aspirin is buried boxes-deep in the garage, you'll be ready to call it quits.

But if your house is basically sound and you have the help of a good contractor, remodeling can be well worth the effort. A contractor is really essential unless you are more knowledgeable about building than most home owners. He can help you avoid costly mistages and save you money in the long run.

For example, patching a leaky roof rarely saves money since roofs wear out all over. One leak generally means more to come. Selecting the right kind of roofing is another important factor if you are to have the long-lasting protection you want for your home.

You'll find books on home remodeling at your bookstore or library. Magazines on the home also offer ideas and list product information.

LITTER HERE

Firms Are Offered Anti-Litter Symbol

A new anti-litter symbol, designed for use by Eastman Kodak Company, is being offered to other companies throughout the country.

The symbol is a trash container designed to spell the words "Litter Here."

The objective of the message is simple—a plan for everyone to use a trash container for litter.

Gerald B. Zornow, Kodak's president, said, "We are not trademarking the design and will be happy to have others use it."

The symbol will be used as a repeated design on wrap material for most varieties of Kodak film.

Farm

(Continued From Page 1)

that haven't been cleared by the government for other than research applications.

Alfalfa is another very important crop in the Center's program, and accounts for the bulk of the forage research. The crop is grown in 5' x 16' plots. A few commercial varieties are tested. Plans are to establish a breeding nursery this year.

Yocum is looking for an answer to the Southern Anthracnos disease which is a problem for local growers. Leaf hopper is another problem that's going to take a lot of research. "Leaf hopper is a problem here because the hoppers can come back even after the second and third cuttings have been sprayed. The sprays we're allowed to use must have a very low residual level. They stop being effective ten days after they're applied, and right now we just don't have a good way to fight leaf hopper. But we're working on it."

Crown vetch, clover and rye grass are other targets of forage research. One crop that used to be studied for its value as a source of hay is soybeans.

Soybeans have been studied at the Center since 1957. Up until 1965, however, they were studied exclusively as a hay crop. That year, they started evaluating varieties that had been developed by commercial breeders. This year, there will be some 4 acres planted to beans.

Although corn and beans are about equal in value as a cash crop, Yocum doesn't feel that beans will ever replace the many acres of corn grown in this part of the state. Beans take only one-half to two-thirds the investment of corn, mostly because they don't require nearly as much fertilizer. But they're harder to grow, and the corn herbicides are much better than the bean herbicides now available," Yocum said.

Mainly, though, corn will stay around because of its value as a silage crop. Unless dairy and beef feeding operations drop sharply, Yocum expects corn to be around for a long, long time.

Beans may have an excellent potential locally in a double cropping pattern. For example, barley removed from a field around July can be followed profitably by soybeans. Beans work better than short season corn, Yocum feels, because the corn is more apt to develop rootworm problems.

Muskmelon and sweet corn are two of the vegetable crops under investigation at the Center. And wine grapes are going to be studied extensively in the years ahead.

"Wine grapes could boom in this area, "Yocum said, "and I think we're going to see the day when grapes could be as important to Lancaster County as tobacco is now. Grapes are a lot of work, but the labor isn't the kind of back breaking work you get with tobacco. And it takes three years after planting to get the first crop, but after that a farmer can gross $1000 an acre with grapes."

Besides crop research, management techniques come in for study at the Center. One of the most important right now is no-till planting. On land subject to erosion, Yocum said he feels no-till is the only way to go.

In the Center's program, paraquat is used to kill the ground cover, and then a crop, usually corn, is planted directly into the stubble, with minimum soil disturbance. Yocum pointed out that no-till uses about the same amount and kind of chemicals as conventional planting methods. But the chemicals stay on the soil until they lose their potency. Paraquat, for example, is a very non-persistent agent.

No-till crops being researched are corn, soybeans, alfalfa and wheat. This year, Yocum said they'll be experimenting with a no-till field that will be planted to corn in the spring, followed by a wheat crop in the summer, followed by an alfalfa seeding in late fall. Each crop will be planted without plowing.

No-till should be very useful, Yocum said, in reestablishing legumes in pastures without plowing up the whole pasture.

This year, comparison yield checks will be run on fields planted to no-till and conventional till. Yocum expects that yields will be about the same on sloping fields, but on flat lands, he expects that the conventional till fields will do marginally better. "The problem with no-till on flat lands is that we just can't get quite the populations we get with conventional till," Yocum said. "It could be just a mechanical problem with setting the planters properly, or it could be that we just don't know enough about planting needs for no-till. Its a problem I think we're going to lick, though."

Yocum also said that he feels no-till planting along with contour strip cropping might enable some farmers to meet a 1977 government deadline for controlling runoff from their fields. He said terraces and waterways might not be needed on farms with gently sloping fields. He pointed out, though, that a farmer who decided to go that route might not be able to plant as many acres in corn as he'd like.

Pa. Broiler Placements Up 16 Pct.

According to the Pennsylvania Crop Reporting Service, placements of broiler chicks in the Commonwealth during the week ending April 7, 1973 were 1,351,000. The placements were 16 percent above the corresponding week a year earlier, and 5 percent above the previous week. Average placements during the past 10 weeks were 3 percent above a year earlier.

Settings for broiler chicks were 1,977,000 - 7 percent below the previous week and approximately the same as the comparable period a year earlier. The current 3-week total of eggs set is 5 percent above the same period a year ago.

Inshipments of broiler-type chicks during the past 10 weeks were zero compared with 9,000 a year ago. Outshipments averaged 255,000 during the past 10 weeks, 1 percent above a year earlier.

Placements in the 21 States were 62,193,000 - approximately the same as the previous week but 3 percent below the same week a year earlier. Average placements during the past 10 weeks were 5 percent below a year ago.

Settings were 78,610,000 about the same as the previous week but 3 percent below a year earlier. The current 3 - week total of eggs set is 3 percent below the comparable period a year ago.

Reduce your risk of heart attack and stroke. Ask your Heart Association for the booklets, "Why Risk Heart Attack?" and "Body Language," warning signals of strokes.

Care of Fine China

Two types of fine china are: a. Porcelain China - creamy or white; b. Bone China - white.

Porcelain and bone china are harder and more chip resistant than semi-vitreous or earthen ware dishes.

Decorations (patterns) under the glaze and protected by an over-glaze are usually machine washable. Dishes of recent manufacture made this way, including gold and platinum rims, are usually made machine washable. Older patterns are usually not. When in doubt, wash one dish for several weeks and then compare it to the rest of the set to see if there is any change in color. Patterns can be affected by long exposure to alkaline washing solutions. Shorter washing time is recommended by most dishwasher manufacturers for all fine china.

Some dishwashers feature a "china and crystal" cycle, which is a short wash, two rinses, and a drying time. Most dishwashers will have either a "short wash" or "light soil" cycle. This can be used as a china wash cycle because they usually consist of the short wash, two rinses, and drying time, as does the "china and crystal" cycle. When none of these cycles are on a dishwasher, the regular cycle can be used by putting detergents only in the main wash - instead of in both washes. The regular dishwashing temperature of 140 to 160 degrees is proper for fine china.

Fine china is light weight and thin. When pieces of the same size are loaded next to each other in a dishwasher, the pressure of the water may cause the pieces to bump at the top forcefully enough to chip slightly. Proper loading of fine china is by alternate sizes, i.e., a plate next to a saucer or bread and butter plate, etc. By alternating, the tops cannot reach each other and no chipping can result.

Water spots caused by water that has more than average mineral content can be prevented by using a rinse aid made especially for automatic dishwashers. A rinse aid sheets water off quickly so that china will be shiny and bright, the way fine china should look after washing and drying.

"THE GENUINE MECHANICAL TRANSPLANTER"

What frozen vegetable do people eat more of than any other?

POTATOES!

More pounds of frozen potatoes are sold than all other frozen vegetables combined. All together, we Americans gobble up about two and a half billion pounds of them annually. French fries are the favorites, but the newer, convenient forms, such as shredded hash browns, diced potatoes and potato rounds, are making significant gains in popularity.

"Value" sums up the reasons frozen potatoes are the top frozen vegetable item. In addition to eliminating a chore most homemakers dislike—peeling potatoes—the handy frozen tubers give consistent potato quality, plenty of nutrition, and they're economical. USDA studies have found that, on an average, the cost per serving of frozen French fries is no higher than the cost of home prepared. Other frozen potato products may cost a few cents more per serving, but the time saved is greater.

With all frozen potatoes, you use every bit you buy. Waste from peeling or spoilage is totally eliminated.

Nutrition and diet-conscious homemakers can include potatoes in menus without feeling guilty. Far from being just a "starchy" food, potatoes are a good source of Vitamin C, several vitamins and minerals, and even a little protein If your family loves potatoes but watches waist-lines, eat this favorite vegetable in moderate amounts You'll get needed food energy, plus important nutrients and appetite satisfaction. All are necessary to successful, long-range weight control.

Frozen potatoes have appeal for weight watchers, budget watchers and clock watchers. No wonder they're the best selling frozen vegetable

Consumers Want to Know

BY MARGARET SPADER
Director of Consumer Affairs
National Association of Manufacturers

I have space for a portable lishwasher in my apartment. Can portable models be installed in case we decide to buy a home?

Some manufacturers are offering a "convertible" model of dishwasher which would be a practical choice for you. It looks like a portable and is mobile, but its casters, top and side panels can be removed when you're ready to have it installed. This model is somewhat more expensive than a portable, but may save you money in the long run.

My husband says that dishwashers are not timesavers because I spend so much time getting dishes ready, loading and unloading. Are statistics available on this subject?

Laboratory studies confirm that the time used for the complete process of clean-up and dishwashing is cut approximately in half with the use of a dishwasher. Depending on the size of the family and the amount of entertaining done, a dishwasher can save from 28 to 52 eight-hour days a year. Another factor proven by USDA tests is that a dishwasher significantly lowers bacteria count on dishes.

What types of dishwashers have the greatest capacity?

Each generation of dishwashers has improved on the design, offering more flexibility so that serving dishes, platters, pots and pans, and casseroles may be added. Some models are designed so the upper rack may be adjusted up and down, a total of about two inches. In others, the upper racks are divided and each half may be adjusted to three different positions. This allows maximum flexibility for loading large and small items in both the upper and lower racks. When shopping for a dishwasher, ask if it's possible to see a demonstration on loading. That will help you to determine how much loading flexibility you really need.

SHORT-CUT

If you're after the kind of short chop that shows up in better feed and more profit from livestock, stop and take a close look at this Gehl CB600 cylinder-screen chopper. We can tell you how to get a Gehl chopper into your harvesting system this year! See us this week!

BEEF PRICES TOO HIGH?

COMPARED TO WHAT??

Yes, food prices have risen this year, as much or more than most consumer goods. **BUT . . . THEY NEEDED TO COME UP!** This week choice beef brought the farmer $46 to $48 per CWT.

- If beef prices had risen as much as **1ST CLASS POSTAGE** since 1950, the farmer would have received $77 CWT this week.
- If beef prices had risen as much as **HOSPITAL COSTS** since 1950 . . . beef prices would have been $135.36 CWT this week.
- Compared to the rise in **WAGES** since 1950 beef would be selling on the hoof for $80.69 the week.
- Compared to the price of a **NEW MEDIUM SIZED CAR** beef would have to sell for $68.80 this week.

Food prices paid to farmers have risen on average of 11 percent in the last 20 years. Their average costs have risen 109 percent. The American housewife spends a smaller percentage of the family's take home pay than other housewives in the world for consumable food.

Food prices to high? Compared to the rest of the economy . . .

NOT AT ALL.

PENN-JERSEY HARVESTORE IN NEW HOLLAND, PENNSYLVANIA

is proud to be part of the American Agriculture. Our congratulations to the American Farmer for a job well done.

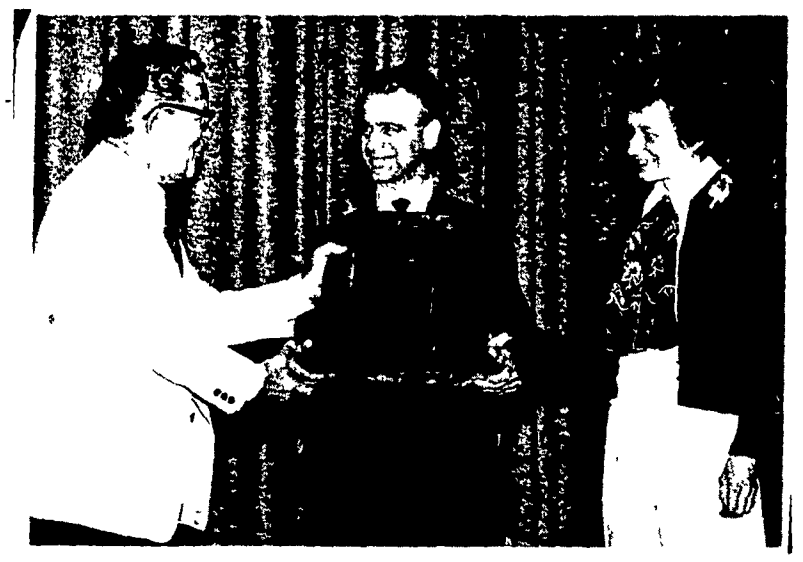
Company Awards To Three Local Men

Each year the Vigortone Products Company recognizes outstanding sales achievements on the part of its authorized dealers and field sales management staff.

Local men recognized in the eastern region region this year by the company were: Leon Hershey, Paradise, first place award as field manager; Ron Hershey, Gap, first place dealer; H. Melvin Charles, Washington Boro RD1, fourth place dealer; and Leroy Fisher, Oxford.

Art Swarzentruber, company president, made the presentations and cited the winners sales achievements and contributions to the growth of the company for 1972. About 350 dealers from across the United States were honored. The recognition Ceremony was held in Cedar Rapids, Iowa.

Art Swarzentruber (left) presents a plaque to Leon Hershey Sr. and Mrs. Hershey, Paradise, at a recent awards presentation.



H. Melvin Charles and Mrs. Charles were among those receiving awards from Art Swarzentruber.

Ron Hershey, Gap (center) and Mrs. Hershey accept an award from Art Swarzentruber.

Honey Making Exhibit

Honey bees and honey will be a featured exhibit April 23 through May 7 at the Frost Entomological Museum of The Pennsylvania State University. Dr. K. C. Kim, Museum curator, says the exhibit should be especially interesting to students.

Provided the weather is suitable, Dr. Kim and associates will have a colony of live bees in a glass-walled hive, enabling visitors to see how honey is made. Dr. Kim and associates will present several such educational exhibits during the next six months.

The Frost Entomological Museum is located in room 102 of Patterson Building at University Park.

The honey bee exhibit will use diagrams and charts to depict various stages in producing honey, from the collecting of nectar by the bees to the bottling of honey. Different types of honey will be displayed in bottles.

Cooperating on exhibit arrangements will be Dr. Allen W. Benton, bee scientist with the Agricultural Experiment Station at Penn State. Working with the project will be students associated with the museum.

The American Farmer . . .

He Produces, He Consumes

The American farmer is unequalled in his productivity. He produces enough food for himself and 47 of his neighbors. Americans have the best food in the world at the world's best prices. Other countires can match the U.S. in the production of automobiles, color TV sets and transistors. However, in the field of agribusiness, we have no competitor.

(Editor's note: This is the second in a series of articles on the American farmer. The series is furnished courtesy of DEKALB AgResearch, Inc.)

The farmer's business is producing food and fiber, recognized as the world's basic industry.

In any society, the necessities of life – food, clothing and shelter – must come first. A color television is of little comfort to a youngster whose stomach is gnawed by hunger. A dishwasher means little to the housewife whose first concern is having ample food to serve her family. Unlike many other products of our economy, food is one product we cannot do without.

As a basic industry, agriculture holds the key to the development of other industries. If most of the world's work force is required to produce food and fiber, then obviously fewer workers are available to develop other industries.

This is not to say that agriculture is the basic industry of every nation on earth. It isn't. The law of comparative advantage enters the picture; A nation develops those industries it is best suited for, based on the resources it has available for that industry. No nation is entirely self-sufficient. World trade helps fill any potential void.

For world trade to exist in the food market, some countries must produce agricultural goods in excess of their domestic needs. Few nations are doing this. But the United States is ... and it's due to the efficiency of the American farmer.

During the past few decades, the American farmer has demonstrated his amazing ability to produce. He has increased his production more than any other major segment of our economy. During the past 10 years, his production has climbed 20 percent, and he's done it on six percent fewer acres. He has done it by taking the proper mix of land, labor, capital, technology and management, and coming up with the most efficient agricultural production the world has known. And the end isn't yet in sight.

His efficiency has made possible the export of the production from one of every four acres harvested in this country. He has made the United States the leading exporter of agricultural products, accounting for more than one-sixth of the world's agricultural exports in fiscal year 1970-71.

Perhaps a statement by Robert Stovall, vice president of Reynolds Securities, Inc., best sums up our amazing American agriculture. Writing in the February 1, 1973 issue of FORBES magazine, Stovall said, "It is ironic that the much maligned farmer and the risky, highly cyclical industries that serve him have now combined to produce the one area of expertise which the U.S. shares with no other country in the world. Others can produce automobiles, color television sets, transistors and pharmaceuticals of like quality to ours, and frequently cheaper. In the field of agri-business, however, we have no real competitor."

As time goes on, the American farmer will likely play a bigger role in the world economy. If his full productive capacity is unleashed, he will be an even more important factor in the struggle to alleviate world hunger.

It's time we recognize the importance of the American farmer's ability to produce, and accept what it has done and can do for our economy. In the October 8, 1972, issue of the CHICAGO TRIBUNE, Economist Pierre A. Rinfret is quoted as saying, "Most people haven't realized yet that a principal part of the President's new economic drive is utilizing in full the incredible productive capacity of American agriculture."

Full employment in our economy, Rinfret continued, "requires maximum economic expansion until all idle capacity is used up, and the turning on of the full productive capacity of agriculture."

The farmer's efficiency has enabled American consumers to enjoy an ample supply of the most wholesome and nutritious food products in history – at the best prices ever. In 1972, even in the face of rising food costs, the consumer spent an average of less than 16 percent of his paycheck for food, or less than half of what he paid in 1929 and the lowest percentage in history. This has enabled consumers to spend an increasing portion of their incomes for products other than food, thereby encouraging the development of non-agricultural industries. The result ... a higher level of living for everyone.

The export of American agricultural products is a "plus" in our attempts to achieve a balance of payments in foreign trade. In 1971, total U.S. exports were valued at $43.5 billion. That same year, the United States exported a record $7.7 billion of agricultural products, accounting for nearly one-fifth the value of all U.S. exports. And a side benefit ... American agricultural exports require financing, storage and both inland and ocean transportation -- thus, maintaining more jobs for more people.

The American farmer may be a farmer, but he's also a consumer. He puts billions of dollars back into the economy to maintain his operation. In 1971, American farmers spent $1.8 billion for petroleum, $1.1 billion for tractors, $3.5 billion for hired labor and paid $3.1 billion in property taxes. He also helps support the same industries that his non-farm neighbors do. He, too, buys refrigerators, television sets, automobiles, furniture and processed foods. In simple figures, five percent of the population accounts for nearly 20 percent of the domestic market for steel, petroleum, rubber, and other major products.

The effect of all of this is that three out of 10 jobs in America are related to agriculture. And at the heart of this is the American Farmer.

AUREO S·P 250

it works!

AUREO S·P 250* is the growth-promoting, health-protecting hog feed additive that is backed by more than ten years of research. Even better than that, day-in and day-out, you can see the results with your own eyes on your farm. That's the real proof that it works. Ask for AUREO S·P 250 with your next order of feed for pigs and sows.

A MESSAGE FOR DADDIES

They'd rather have you around than your insurance.

Get yourself a good, thorough examination once a year. Once a year, let your doctor really look you over. It'll take a little time, and a little patience. And maybe he'll poke around a little more than you'd really like. And so he should.

The whole idea is to keep you healthy. If nothing's wrong (and more than likely, there isn't) hooray! Come back next year. But if anything's suspicious, then you've gained the most important thing of all: time.

We can save 1 out of 2 persons when cancer is caught in time, caught early. That's a good thing to know. All Daddies should know how to take care of themselves so that they can have the fun of taking care of their kids. Remember—it's what you don't know that can hurt you.

Lasso® plus atrazine tank mix can go down with liquid Nitan.

Just put it on. Both Nitan and herbicide in one trip.

Lasso plus atrazine controls weeds in corn. Both grasses and broadleaves — including pigweed and lambsquarters. Without that immediate and time consuming application.

That's what you expect from your herbicide!

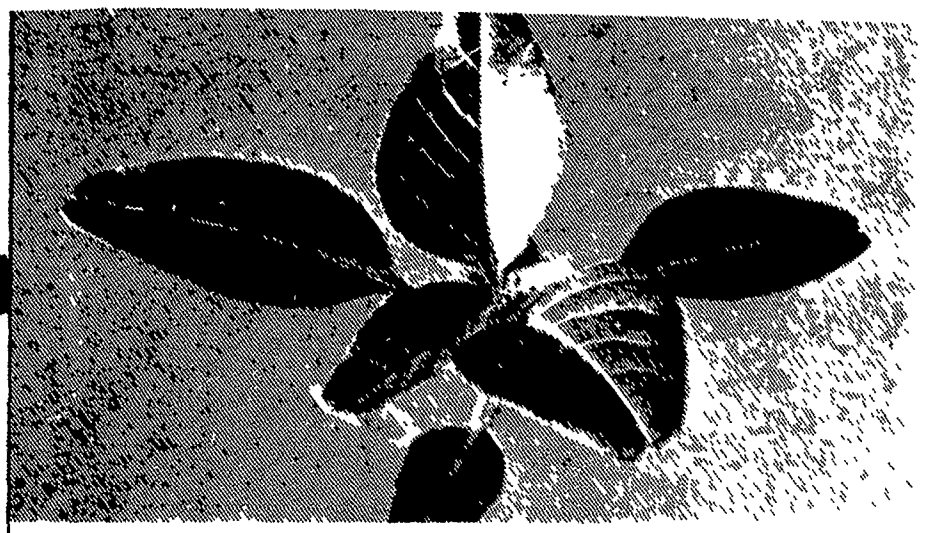
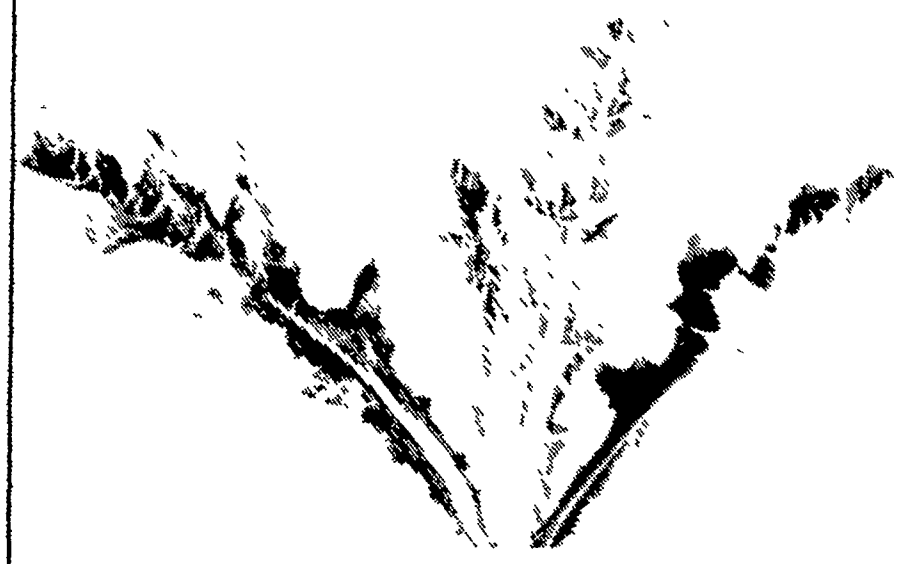
SMARTWEED?



PIGWEED?

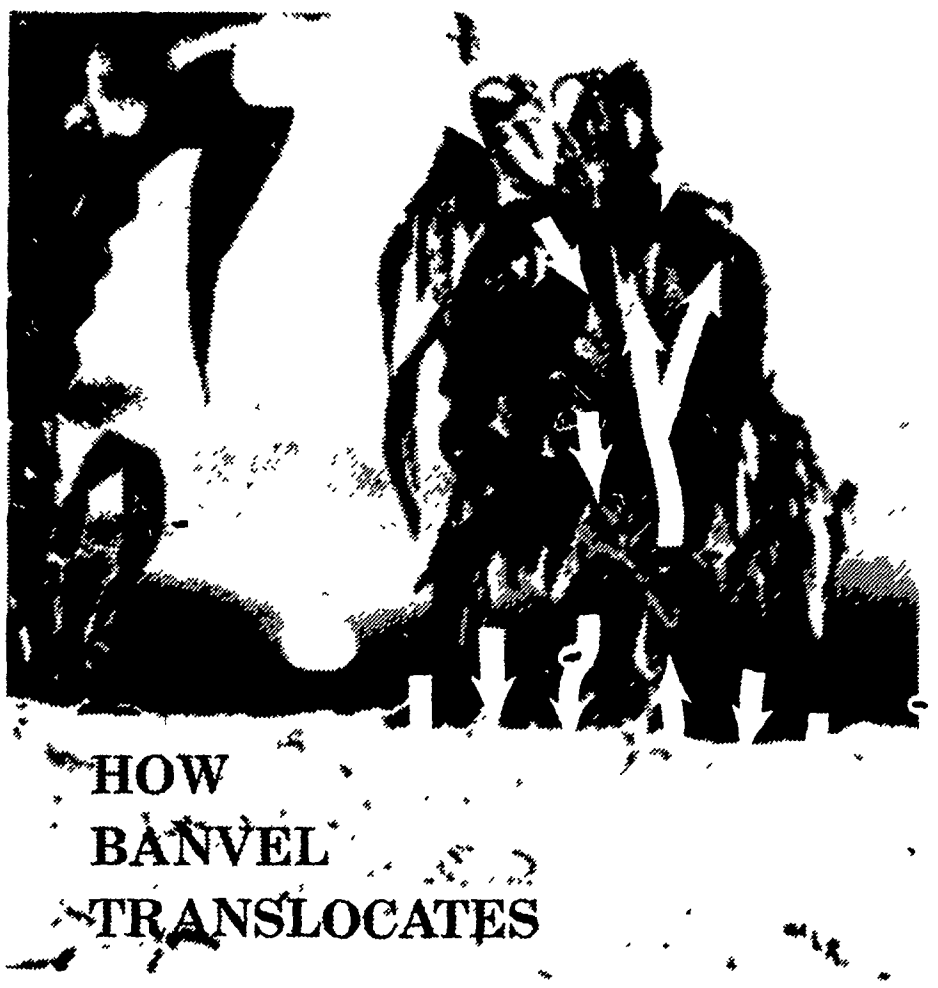
MORNING GLORY?



THISTLE?

BANVEL® Herbicide

POST-EMERGENCE APPLICATION IN FIELD CORN GETS TO THE ROOT OF YOUR TOUGH BROADLEAF WEED PROBLEM



HOW BANVEL TRANSLOCATES

Your corn crop is well along. But tough, deep-rooted weeds threaten to take over. The earlier you spray Banvel, the better, preferably before hot, humid weather.

Even though you spray over the tops of corn, normally no brittleness develops. If you see velvetleaf or pigweed, a lower rate of Banvel mixed with 2,4-D will give most effective control.

Banvel works! For one simple reason. Banvel translocates. Absorbed by leaves, stems, roots, Banvel moves with plant fluids from leaf tip to root tip. Destroys as it goes So, no regrowth.

In permanent pasture, Banvel gives you easy control of more than 40 of the most common weeds, including wild garlic, weed brush and weed trees.

Cost of Banvel? Up to $1.90 per acre broadcast in corn. Ask your dealer or custom sprayer for full information.

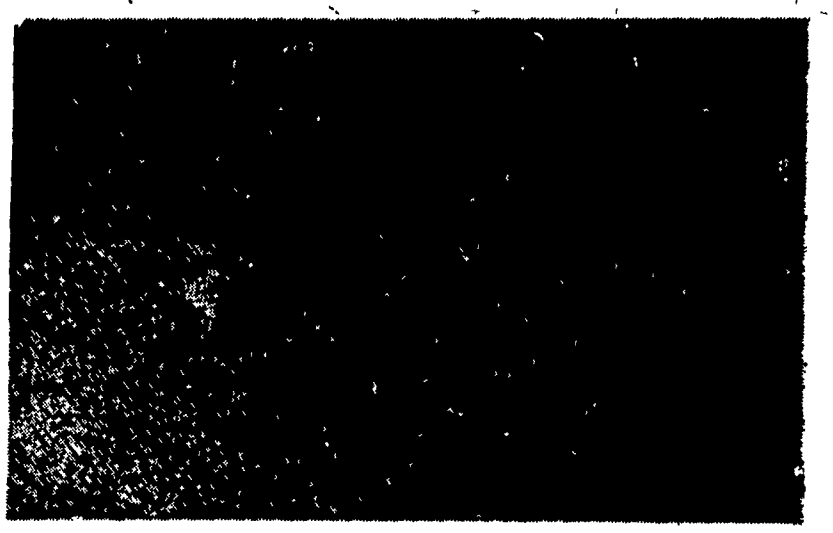
A Special Day Out For Farmers Wives



By Sally Bair
Feature Writer

Fashions and creative crafts were the highlights of the annual Ladies Day Out sponsored by the women's committee of the Lancaster County Farmers Association held last Tuesday.

It was a day when chores were set aside and the farmers' wives enjoyed fun, food and fellowship.

But there was a serious note, too, for the nearly 175 women attending. There were speakers and reports, and the topic which kept recurring was the recent meat boycott.

The only man on the program was Donald Hershey, Manheim RD2 president of the Lancaster County Farmers' Association. He told the women that "farmers are only catching up" finally to earning an equitable living. Hershey said, "We are entitled to a little more."

He gave statistics of the percentages of income which consumers in other countries pay for food, from a high of 52 percent in Russia to a low of 17 percent in the United States, and said, "Food is the best bargain you can get anywhere,"

Hershey also urged all the women to vote yes on the referendum which will appear on the May primary ballot.. If the referendum vote is favorable, it will allow the constitution to be changed so that farm land can be assessed according to its value as farmland rather than its speculative market value.

He showed the importance of maintaining farm land with the example that one acre of fertilized corn will allow 170 people to breathe for a year, as opposed to putting that farmland into concrete.

Mrs. Jesse Wood, Kirks Mill, who will represent Lancaster County in the Mrs. Pennsylvania Farmers' Association contest, gave a talk on public relations for agriculture. She said, "It's about time we receive a fair price for our product." While other industries can establish a price for their product on the basis of the costs of production, Mrs. Wood said, "We're at the mercy of the buyer." She added, "Farmers wives have the responsibility to educate friends and neighbors. Food is the greatest bargain ever. Please tell your neighbors, ladies!"

Reporting from the state women's committee, Mrs. Helen Wivell also urged the women to vote yes on the referendum in the May primary to insure preservation of farm land. She spoke on the theme of the national convention which was, "Two million women using four million hands to strengthen and preserve our country." She said farm women should provide moral leadership and take responsibility in areas of strengthening family units, staying informed on local problems, legislative activities and promoting consumer understanding.

The morning program featured workshops on candy making, taught by Mrs.. Marian Lefever; decorating ceramic eggs, by Mrs. Barbara Mowrer; decorating the inside of eggs, by Mrs. Janet Buchen; and making candle rings from scraps, by Mrs. Kathy Bucher.

Following the noon luncheon about 35 women, men and children modeled clothing which had been sewn by members. Mrs. Miriam Kauffman, Elizabethtown RD1, coordinator for the fashion show, encouraged more women to try home sewing She stressed that the home seamstress can enjoy the satisfaction of having her very own, unique fashions, and said, "Home sewing is easier on the family budget."

Winner of the talent contest was Glenn Hough, Peach Bottom RD2, who played a selection on the piano and organ.

(Continued On Page 35)

Steve Kauffman, Elizabethtown RD1, models a double knit jacket which his mother, Mrs. Miriam Kauffman, made for him.

By special request, Mrs. Connie Rutt, Quarryville, agreed to model her wedding dress, which she made.

Patti Hershey, whose father is president of the Lancaster County Farmers' Association, is wearing a navy floor-length dress featuring a white pinafore, which her mother sewed.

Workshop participants try their hand at decorating ceramic eggs.

Ida Risser

Today is the day to spread the newspapers on the kitchen table and let the children paint Easter eggs. Of course, the older ones can help too and show their artistic ability. It doesn't seem like Easter if I don't "dot" a few eggs with pink, purple and green.

As a girl of eight years, I had a friend named Jane who received an enormous basket of chocolate and coconut filled candles. Compared to my tiny green basket, it was "out of this world." I was jealous.

What I didn't realize at the time was what I had that she didn't have. On Easter morning I was surrounded by a large family and she lived in a hotel where her mother was employed. The basket of goodies had been sent by a father who lived somewhere else.

So let us count our blessings as we share Easter activities with our families.

XXX

The other Wednesday I had lunch with several hundred other ladies at the Hilton in Lancaster. The seminar was entitled "The Challenge of Being a Woman."

What a change of scene when the next day I had lunch with my son at a lunch counter in Oxford. I turned to him and said "That was a lallapalooza of a meeting yesterday." He asked me what I meant. After explaining to him, I checked with the dictionary and I'd said what I intended — "something very striking or excellent."

Sometimes when I use words like "flabbergast" or "gobbledygook" with my children I'm forced to get the dictionary to back me up.

XXX

I'd like to share a few excerpts from the thank-you letters written by our little farm visitors.

"I liked when you let me stick my fingers in the milker — now I know how the cow feels."

Also, "I liked your puppies and I hope you get more."

Another said "One of the cows' food smelled like sauerkraut."

Still another said, "I liked when the cafe tried to eat my coat."

We take these things for granted and don't realize what we have to share.

Special Day

(Continued From Page 34)

In the poster contest, first prize in the under 14 division went to Greta Theidner with her topic, "The Balance of Life." Second place went to Jane L. Stoltzfus with the topic "Give a Hoot, Don't Pollute," In the over 14 category, first place was given to Tom Wivell for "Vehicle Emission Control."

The talent and poster contest was coordinated by Miss Kay Weaver, who also sang the theme song for the day, "Everything is Beautiful." She was the state winner in PFA's talent contest last year.

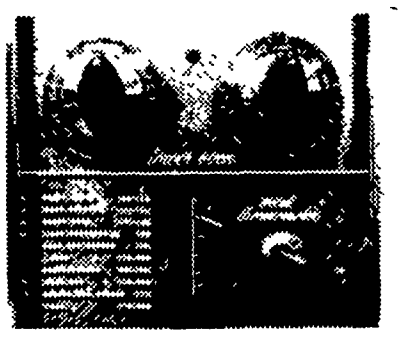
Guests attended from Berks, Bucks and Chester counties.

Mrs. Vivian Stauffer, RD1, Ephrata, Lancaster County Women's Committee Chairlady, was in charge of the program in which "everything was beautiful" on this special day for farmers' wives.

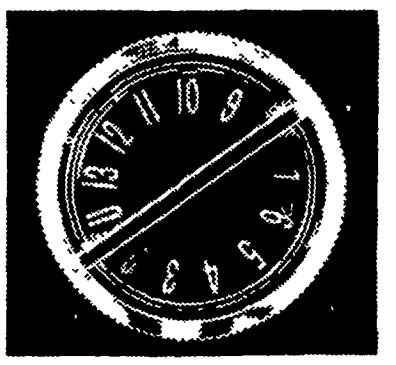
3 WAYS
To Dial a Saving

Everyone's conscious of the big need to conserve our nation's energy. But many people throw up their hands and say, "What possible help can my family give?" The answer is "Plenty," if all our 750,000 residential customers will make an effort to think carefully about the way you use electrical appliances. While the following hints are undoubtedly 'old hat' to many homemakers each can play a part in keeping your electric usage—and bills—down.

For dishwashers that don't have partial load settings, rinse and hold your dishes until there is a full load.



Make the best use of a warmed-up oven. Bake several dishes together which require slightly different heat settings and remove as each is done.



If nobody's watching television, turn it off.

Watch for others in our series of watt-saving hints. They'll ease the drain on your pocketbook and play a small but mighty part in easing the nation's energy drain.

This hand-knit coat is a complete do-it-yourself project. Even the sheep for the wool were raised on Mrs. Ruth Mentzer's farm at New Holland RD2.

Recipe Exchange . . .

HOME ON THE RANGE

Blueberry-Orange Nut Bread

3 cups flour
¾ cup sugar
3 teaspoons baking power
¼ teaspoon soda
1 teaspoon salt
Sift together dry ingredients.
3 eggs
½ cup milk
½ cup butter
1 tablespoon grated orange peel
2-3 cup orange juice
Beat together and stir into dry ingredient mixture.
Fold in:
1 cup blueberries (fresh or frozen)
½ cup chopped walnuts
Bake in greased 9x5x3 inch loaf pan at 350 degrees for 60 to 70 minutes.

Mrs. Gordon Arment
R.D.2
New Holland

XXX

Strawberry Pie

4 cups fresh strawberries, washed and capped
3 tablespoons corn starch
1 cup sugar
½ teaspoon baking powder
3 drops red food coloring
1 baked 9-inch pie shell
Spread two cups berries over bottom of pie shell.
Mash or break remaining berries in pan. Add sugar, cornstarch, baking powder and mix well. Place over low heat. Bring to boil, stirring constantly. Reduce heat and cook 10 minutes. Add food coloring to deepen red mixture.
Cool, then pour over raw berries in pie shell. Refrigerate till thoroughly chilled. Top with whipped cream. Delicious!

Florence N. Zimmerman
R.D.2
Ephrata

XXX

Farmers Breakfast Cake

2 cups sugar
2 eggs
3 teaspoons baking powder
1½ cups milk
½ cup butter and vegetable shortening, mixed
3 cups flour
Mix above ingredients together.
Prepare crumbs by mixing:
4 tablespoons flour
4 tablespoons sugar
1 tablespoon vegetable shortening
Sprinkle on top of cake and bake.

Mrs. Roy H. Siegrist
Mount Joy

XXX

Keep-A-Week Slaw

Combine and let stand two hours:
2 medium heads cabbage, shredded
2 tablespoons salt
Boil together about two minutes:
4 cups sugar, or to suit taste
2 cups vinegar
1 cup water
Cool this mixture and pour over cabbage and salt mixture.
Add:
1 bunch celery, diced
1 green pepper, chopped
1 teaspoon celery seed
1 teaspoon mustard seed
Mix thoroughly and store in covered plastic or glass containers in refrigerator. Let mellow for about 24 hours.

Mrs. Ivan Martin
RD2
Ephrata, Pa

XXX

Date Pinwheel Cookies

2¼ cups chopped dates
1 cup sugar
1 cup water
Cook over low heat until thick, about 10 minutes. Add one cup nutmeats and let cool.
1 cup shortening
2 cups brown sugar
3 eggs, well beaten
½ teaspoon salt
½ teaspoon baking powder
4 cups sifted flour
Cream first three ingredients. Add dry ingredients and mix.
Roll out in sheet (about one-third of dough at a time). Cover with one-third date mix and roll up like jelly roll in waxed paper or foil. Chill thoroughly. Slice and bake at 375 degrees.
Will keep one week or so, bake as needed.

Mrs. Everitt Vanderhoof
RD5
Wellsboro

XXX

Cherry Crumb Crunch

½ cup butter or margarine, melted
1 cup brown sugar, packed
1½ cups flour
¾ teaspoon salt
½ teaspoon baking soda
¾ cup oats (quick cooking)
¾ cup chopped walnuts
1 can cherry filling, or 1½ cups thickened cherries
Combine first seven ingredients to a crumb mixture. Firmly place half the mixture in the bottom of a glass cake pan. Spread cherry filling on top of mixture, then sprinkle with remaining crumb mixture. Bake at 350 degrees for 30 to 35 minutes.

Mrs. Ernest Holsopple
R.D.1
Holsopple

XXX

Gelatine Ice Cream

4 tablespoons gelatine

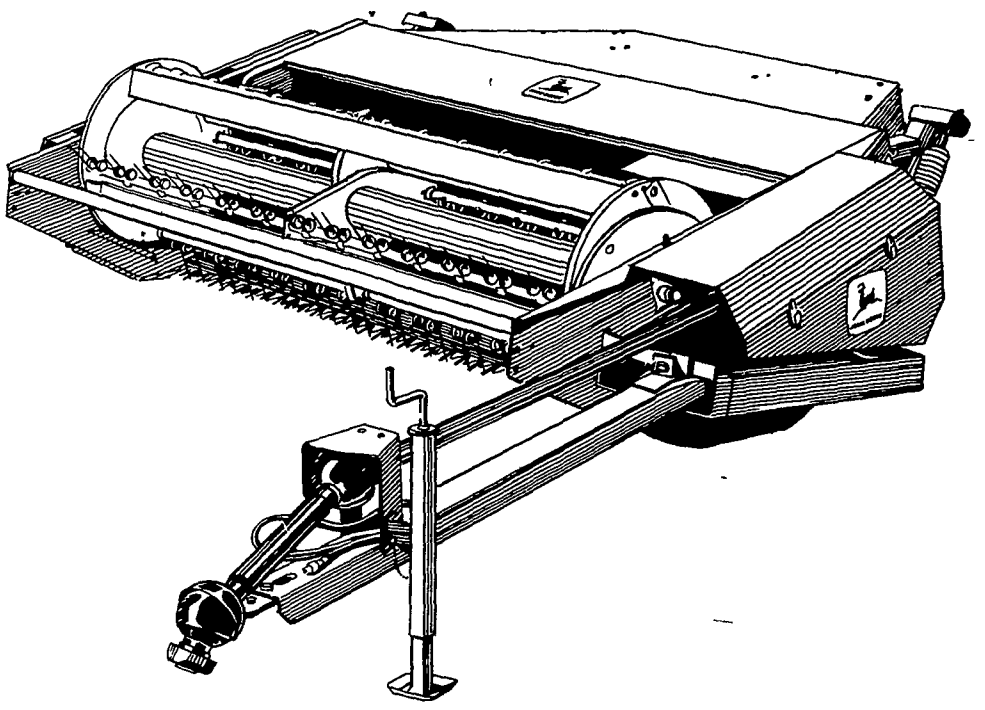
New 1209 Mower/Conditioner is



The balanced one

Front to back . . . side to side . . . inside and out the 1209 is the balanced mower/conditioner.
Exclusive high-flotation terra tires positioned up close to the cutterbar react quickly to ground contours. That's front-to-back balance, for cleaner cutting.
Side-draft is all but eliminated.
Wheels are closer to the center of gravity, so nearly equal weight pulls back on right and left sides. That's side-to-side balance.
There's balanced power-delivery, too—gears running in oil drive the "crumper" rolls (crimp plus crush action).
Stop in and see the 1209.

HOME ON THE RANGE

(Continued From Page 36)

1 pint cold milk
2 quarts milk
8 eggs, separated
3 cups sugar
1 teaspoon salt
6 teaspoons vanilla (or other flavors)
2 quarts light cream

Soak gelatine in pint of milk. Beat egg yolks in another pint of milk and add some of the sugar.

Bring two quarts of milk and salt to a boil and add egg yolk mixture. Heat to boiling point, add gelatine, mix well and cool to 150 degrees. Add whipped cream, beaten egg whites with the rest of the sugar. Fills 6-quart freezer.

Miss Lydia Weaver
R.D.1
Orrstown

XXX

Potato Pancakes

2 eggs, separated
1 cup mashed potatoes
½ cup flour
1 cup milk
2 teaspoons baking powder.

Add egg yolks to the mashed potatoes and mix well. Add the flour and baking powder alternately with the milk until smooth. Fold in the stiffly beaten egg whites and drop spoonfuls on hot greased griddle or skillet. Finely chopped onion is sometimes sprinkled on the batter on griddle before turning.

Serve hot with meat.

Mrs. Ira Davis
R.D.2
Quarryville

XXX

Chocolate Marble Cake

2¼ cups granulated sugar
¾ cup lard
Pinch salt
1½ cups cold water or milk
4½ cups sifted flour
4½ teaspoons baking powder
6 egg whites, beaten stiff

Chocolate Mixture

¾ cup cocoa
6 tablespoons sugar
¾ cup hot water

Mix together, cool before using. Then add ¾ teaspoons soda and 1½ teaspoons vanilla. Stir this in half of the batter.

Bake at 325 degrees for one hour.

Mrs. Aaron Brubaker
RD2
Mohnton

XXX

Vanilla Crumb Pie

Filling:
1 egg
1 tbsp. flour
½ cup sugar
1 cup molasses
2 cups water
1 tsp. vanilla

Cook till thick.

Crumbs:
2 cups flour
½ cup sugar
½ cup shortening
1 tsp. baking soda
1 tsp. cream of tartar

Place cooked filling into two unbaked pie shells. Put crumbs on top and bake at 375 degrees till firm and brown. Makes two pies.

Mrs. Nevin Vogel
R.D.2
Manheim

XXX

Potato Sticky Buns

2 cups cooked mashed potatoes
2 cups lukewarm water
2 cups sugar
1 tablespoon salt
1 cup melted shortening
2 packages yeast
4 cups flour

Mix these ingredients and let rise one hour.

Add:
5 beaten eggs
6 cups flour

Mix and knead, then let rise until double in size. Roll and add melted butter, sprinkle on brown sugar and cinnamon, then roll like a jelly roll and cut into ½ inch slices and put on top of syrup in pans. Let rise again one hour, then bake 30 minutes at 350 degrees.

Syrup

1-3 cup margarine or melted butter
½ cup brown sugar
1 tablespoon molasses
½ cup chopped nuts

Warm these ingredients and mix well and spread in bottom of pans.

Mrs. Elam M. Zimmerman
R.D.2
Ephrata

Meal Planning and Living Alone

Living alone is no excuse for drab, monotonous, poorly-planned meals, especially if you own a food freezer. Ruth J. Buck, Extension nutritionist at The Pennsylvania State University, says when you're in the mood to cook, bake a ham, roast or large meatloaf with all the trimmings. Instead of eating warmed-overs for two weeks, divide the meat and vegetables into portions, placing them into sectioned foil dishes. Freeze your homemade TV dinners for later use.

Farm Women Societies

Society 8

Farm Women Society 8 met Thursday, April 12 at the home of Mrs. Paul Witman and Mrs. Mary Sarver, Mount Joy RD2. Vice-president Mrs. Lewis Bixler presided over the meeting in the absence of the president, Miss Anna Mae Eby.

Ten members of Society 23 from the Washington Boro area were entertained during the evening. Twenty-six members were present and several visitors attended.

Mrs. Witman read selections from the gospels, giving the account of the first Easter during devotional time. Mrs. Jeanne Reist sang and interpreted the hymn "Amazing Grace". Special music was presented by Jill, Jodi and Abram Weidman, ages four, nine and 10, with Jill also playing a violin solo.

The minutes were read by the secretary, Miss Mary Grace Martin. Helen Wivell and Ruth Eby reported having attended the Women's Seminar at the Hilton Inn where Dr. Joyce Brothers spoke. Several other members attended as well.

The guest speaker for the evening was Mrs. Charles Adams, a schoolteacher, who spoke on the importance of living one day at a time, for after all this is what each one is able to accomplish. We should make the best of the circumstances at hand rather than to be overly concerned about the cares we may have in days ahead.

At present there is room for a few more passengers on the bus going to Johnstown on May 16.

The next meeting will be held at the home of Mrs. Harold Frey, Marietta RD1, at 2 p.m. May 19. Harry Hovis is scheduled to be the speaker.

Society 10

Farm Women Society 10 met recently in the home of Mrs. Clarence Reinhold, 6079 East Main Street, East Petersburg. Assisting hostess was Mrs. Harry Weider who also led devotions with the reading of Corinthians 13, a "love" story.

During the business portion of the meeting under the direction of Miss Ida Kunkle, president, gifts were approved for the County Project, the Welsh Mountain Clinic, and the March of Dimes.

Mrs. Chester Dietrich, East Petersburg, was welcomed as a new member.

Amos Herr, Landisville, presented a slide and travel talk on the South Sea Isles. He described New Zealand by comparing it to New York and Pennsylvania in size. Other islands include Bora Bora, Takiki, and Maori.

The next meeting of Society 8 will be held at 1:30 p.m. May 5 in the Bethany United Methodist Church, Concord and Orange Streets. Mrs. Jacob Esbenshade and Mrs. Charles Shank will be hostesses. Mrs. John Esbenshade will lead devotions.

Each member is asked to bring several copies of their favorite recipe for a recipe exchange. Mrs. L. S. Tucci, Millersville, Will speak on "Crosses." The Rev. Donald Zechman, pastor of Bethany U.M. Church, will present several organ selections.

Farm Women Societies

Society 14

Farm Women Society 14 voted to donate $25 to the Welsh Mountain Clinic at a meeting held recently at the Village Vista Nursing home. Mrs. Mervin Denlinger, and honorary member, served as hostess.

Mrs. Paul Longenecker led the group in devotions. Mrs. Longenecker was assisted by Mrs. Charles Leaman, Mrs. Ira Herr and Mrs. Jacob Herr.

Society 14 was invited by Society 30 to a meeting at 7:30 p.m. May 21 at the Farm and Home Center.

The program for the day was a humorous dialogue by Mrs. Noah Furhman, Lititz. Vocal selections were presented by a sextet.

The next meeting will be a Mother-Daughter banquet at Meadow Hills Dining House, Lancaster RD6.

Society 18

Farm Women Society 18, met at the home of Mrs. Warren Weaver. Devotions were led by Mrs. Edward Wissler.

The business session was conducted by Mrs. David E. Buckwalter, president. Announcement was made that the Society would be entertained by Society 3 at 7 p.m. April 26. A report was made on the pizza sale conducted by the group.

The program for the meeting featured a book review, "Woman At The Well", written by Dale Evans. The book was reviewed by Mrs. J. C. Groenendaal.

The next regular meeting will be held May 19 at the home of Mrs. Igerna Smith.

Society 19

Farm Women Society 19 met last Saturday at the home of Mrs. Paul B. Hollinger, Mount Joy RD1. Mrs. Daniel H. Rohrer led the group in singing "The Love of God." Mrs. Kenneth Warfel was in charge of devotions. Roll call was responded to by giving a favorite egg dish.

A donation of $100 was voted to the county project, Welsh Mountain Center. The American Cancer Society was donated $10. Scholarships in the amounts of $25 were agreed upon for the outstanding home economic students in the Manheim Township and Hempfield School districts.

Mrs. John Hess, guest speaker, gave a talk on "Egg Decorating". She displayed many of her unique, ornamental eggs.

The Society will hold a rummage sale at 12 o'clock April 30 and May 1.

The May meeting will be held at 7 p.m. Friday, May 11 at the Coca Cola building, Manheim Pike. The Society will entertain Society 3 and County Officers.

Society 23

Farm Women Society 23 completed plans for a Mother-Daughter dinner during a recent meeting held at the home of Mrs. Paul Keperling, Lancaster RD2.

The dinner will be held at 6 p.m. Tuesday, May 1 in the home of Mr. and Mrs. Ralph Kauffman in their historically furnished home at Lancaster RD2. Assisting in the plans and serving as hostesses are: Mrs. Amos Funk, Mrs. Harold Hoak, Mrs. Newlin Groff and Mrs. Robert Rohrer. Mrs. Edgar Funk is general chairman.

Mrs. Edgar Funk was in charge of devotions at the April meeting, featuring excerpts from the Biblical account of the Easter story. Mrs. Howard Martin, president, was in charge of the business portion.

Several members of Society 23 sang for local shut-ins during Holy Week.

All members agreed to write to the National Aeronautics and Space Administration Astronauts Office to commend the Astronauts for reading the Bible while on space missions. The letters are in protest of the demand that the astronauts be censured for reading the Bible as they orbited the moon in December, 1968.

Members of Society 23 will host overnight several homemakers visiting May 2 and 3 from Michigan. Members will also assist with the Pennsylvania Dutch luncheon planned at the Farm and Home Center May 3. Mrs. Doris Thomas, Lancaster County home economist, is in charge of arrangements.

Society 31

Farm Women Society 31 heard Mrs. Mary Myers, PP&L home economist, speak at its meeting Monday night at the home of Mrs. Robert Kreider. The energy crisis is real so use appliances wisely and conserve electricity, Mrs. Myers advised.

Mrs. Myers presented a blender demonstration preparing or suggesting varied uses from dips to baby food to desserts, even cole slaw.

It was announced that the county board voted unanimously to support the Welsh Mountain Clinic as the county project for this year.

Society 31 will be entertained by Society 16 at 12:30 p.m. Saturday, May 12, at the home of Mrs. Graham, Green Tree.

Tickets for the Spring Rally May 16 were distributed to the 10 members who are attending. Mrs. Mark Risser represented the group at the auxiliary meeting of the Lancaster General Hospital and Solanco Health Center.

The next meeting will be a Mother-Daughter tea at the Mechanic Grove Church of the Brrethren May 21.

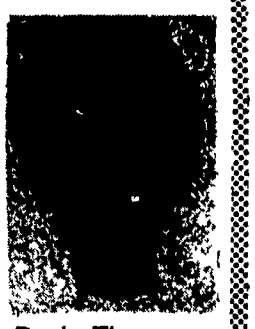
Ladies, Have You Heard?



Doris Thomas

By Doris Thomas,
Extension Home Economist

Clothing Labeling Misconception

Why do some clothing care labels say "Professional Dry Cleaning Only?" If you've bought clothing since the new permanent care labeling requirements went into effect last July, you may have wondered, too, why a garment of the same fabric you had formerly cleaned with success with coin-op dry cleaning now is labeled for professional care.

It's all a misunderstanding. And the National Automatic Laundry and Cleaning Council has been working hard to have the confusion corrected.

The Federal Trade Commission has now approved an amendment to the regulations which says the label may now read "Dry Clean Only." The inclusion of the word "professional" has only served to confuse the consumer.

Many garments are still in the stores with the former inaccurate label. So you may still buy a garment which says professional dry cleaning only. You must exercise judgment at the present time, for some garments with leather trim and some man-made furs do require professional cleaning. However, a plain wool double knit dress with no trimming can be cleaned quite satisfactorily with low cost automatic dry cleaning.

In many cases, both automatic and professional operations make use of the same proven cleaning solvent, perchorethylene, that has been in use for over 40 years.

If a garment needs special handling and pressing, the skill of a professional presser may be desirable and you'll pay for this extra labor. Many of today's knits don't need pressing or special handling and clean very well by self-service operations. Any needed touch-up steaming is very easily done at home – and you'll save money on your cleaning bills.

If you don't have a full load of garments to be cleaned at one time, you can toss in some of those garments labeled washable. Dry cleaning tends to keep colors brighter and keep the fabric looking new longer. Troublesome grease stains on washable polyester knits often come out with dry cleaning.

Care labels can be a great aid to the consumer. But they must be accurate and the consumer must know they give reliable information.

Comparison Shopping

You can save as much as 100 percent by using a simple buying technique – comparison shopping. That means shop around. Check prices and products and compare brand and style at more than one store before you buy. This takes time and effort but comparison shopping can save you money.

Although some products are available at only one price, most products are priced differently from store to store. Comparison shopping, for example, for a television set produces prices from $139 to $219 for the same set. Compare discount, mail order, regular and sale prices.

To get information about the product that will help you make a decision, look the field over before you buy. Note the differences in prices, features that you man need and services. Talk to those who have different brands and models.

To make comparisons easier, use special consumer buying pamphlets, magazines, study advertisements and use the telephone to follow through and get additional information. To help in your final decision, take notes as you look around and collect prices and information.

Take time to make comparisons when dollars count. Shopping at several stores for a small inexpensive item just to save a few pennies doesn't make the effort too worthwhile. But spending time to do comparison shopping pays off in satisfaction and money saved.

Why walk on the grass when you can ride?

Before you buy a walk-behind mower, check the price of a John Deere Gas-Powered Riding Mower. You'll be pleasantly surprised at how little more it will cost you to enjoy their convenience. Select from two models—6- and 7-hp. Both do an excellent job of mowing, trim close, and ride great. Grass catcher available for 6-hp. model. Ask us about our Finance Plan.

KINDS OF MILK

So often I'm asked about the various kinds of milk that one can buy nowadays. There are fresh whole milk, skim milk, two percent milk, buttermilk, chocolate milk, chocolate dairy milk, evaporated milk, fortified milk, and nonfat dry milk, to name a few. There are other kinds in a few markets but these are the milks most often available.

How is one to know what it is that each milk has to offer? Here are details that you might keep handy in your cookbook:

Fresh Whole Milk: By law, fresh whole milk generally must contain not less than 3.25 percent milkfat and not less than 8.25 percent milk solids-not-fat. Individual states set their own laws and percentages can vary somewhat. Most whole milk is pasteurized. An 8-ounce glass contains about 160 calories.

Skim Milk: Skim milk is fresh whole milk from which the fat has been mostly removed. In different states standards will vary but usually skim milk will be between 0.1 and 2 percent milkfat. An 8-ounce glass contains about 90 calories. The nutrient value is the same as whole milk except for the milkfat, and fat-soluble vitamins it does not contain. Many dairies, though, add both vitamin A and D.

Two Percent Milk: This milk contains twe percent milkfat and is made from fresh whole milk and skim milk. About 150 calories per 8-ounce glass. Many dairies modify two percent milk by adding nonfat dry milk.

Buttermilk: An 8-ounce glass will contain approximately 90 calories. No longer is buttermilk the milk that is left after butter has been churned. Today's cultured buttermilk is made from quality fresh fluid skim milk, concentrated fluid milk (whole or skim), or reconstituted nonfat dry milk. Its food value is the same as the milk from which it is made.

Chocolate Milk: This is whole milk flavored with chocolate syrup or powder. Milkfat content is usually not less than 3.25 percent. Chocolate milk is pasteurized after all ingredients are combined. An 8-ounce glass - 213 calories. Chocolate dairy drink is made from skim or partially skim milk - about 23 percent milkfat and the concentration of nonfat milk solids is at least 90 percent that of skim milk. 190 calories per 8-ounce glass.

Evaporated Milk: Fresh fluid milk first is pasteurized, then concentrated by removal under vacuum of about half of the water. After homogenization, vitamin D is added. Finally the milk is sealed in cans and heat-sterilized. It then needs no refrigeration until the can is opened.

Fortified Milks: These are milks enriched by the addition of products such as vitamins A and D, multivitamin preparations, minerals, lactose, and/or non fat dry milk. The degree of fortification can vary as can the fat content.

Nonfat Dry Milk: Made of pasteurized fresh whole milk from which water and fat have been removed. When reconstituted with water, as recommended, nonfat dry milk has the same food value as fresh fluid whole milk.

Pa. Cows Producing Less

Pennsylvania's milk cows produced 586 million pounds during March, according to the Crop Reporting Service. This was four percent less than March 1972 milk production. The milking herd in March consisted of 670,000 cows, compared with 687,000 a year ago. Average production per cow during March was 875 pounds compared with 885 pounds last year.

April 1 reports indicate Pennsylvania dairymen are feeding 14 3 pounds of grain and other concentrates daily per cow in their herds. A year ago the figure reported was 14.1 pounds.

U.S. milk production during March is estimated at 10 3 billion pounds, two percent less than March a year ago. Daily average production was three percent above February, compared with a four percent increase during the corresponding period last year. Production during the first quarter of this year is 2.1 percent less than a year earlier. March output provided 1.58 pounds of milk per person daily for all uses compared with 1.62 last year and 1.54 pounds in February.

Milk production per cow was 894 pounds, nearly unchanged from last year's 893 pounds The March rate was at a record high in 20 of the 33 states with monthly estimates During March there were 11,549,000 milk cows on farms, down 2 percent from that month last year

Feeding of grain and concentrates averaged 13 8 pounds on April 1, a record high for the date and slightly above the previous record of 13 6 pounds a year ago. Feeding rates were above a year earlier in nearly all states.

Roses Like Sunshine

Roses grow best where they have full sunshine all day. They will grow satisfactorily, however, if they have at least 6 hours of full sun a day, says a U S. Department of Agriculture Bulletin on Roses for the Home.

Record Enrollment Reported On 1973 Feed Grain Program

For the third year in a row, the number of farms enrolled in the feed grain program has set a record, according to the final signup report issued by the U.S. Department of Agriculture. The final report, which covers the Feb. 5-March 16 signup period, shows 1,852,274 farms enrolled. This compares with 1,773,888 signups in 1972 and 1,759,315 farms enrolled in 1971.

Base acreage on enrolled farms also reached a new high for 1973, totaling 113 million acres, about 4½ percent more than the previous record of 108 million acres set last year. Enrolled farms represent 62 percent of the 2,990,199 eligible feed grain producing farms, and 87 percent of 129,966,672 acres of total feed grain base.

Of the 113,035,453 acres of feed grain base on enrolled farms, 76,431,863 acres are corn base, 21,460,829 acres represent grain sorghum, and 15,142,761 acres are barley base, all of which are new record enrollments. The 1973 bases compare with the previous record levels set in 1972 of 73,040,194 acres for corn, 21,227,619 acres for grain sorghum, and 14,010,796 acres for barley.

Enrolled farms signed up for full compliance, for which the set-aside requirement is 10 percent of base acreage, total 1,507,767 farms or about 81 percent of total enrollment. The remaining 344,507 farms elected to participate under a program representing less than full compliance, for which no set-aside is required. Base acreage on enrolled farms electing full compliance totals 91,268,605 acres, indicating a set-aside of about 9.1 million acres.

Pennsylvania figures show 31,876 farms signed up.

E-town Donegal Club Reorganizes

The Elizabethtown-Donegal 4-H Community Club held its organizational meeting for the year. The Club has a new tobacco and field corn leader, Herb Frey.

The Club also elected officers. They are as follows: Linda Stoltzfus, president; Jeff Swarr, vice-president; Gerry Kauffman, secretary; Judy Stoltzfus, assistant secretary; Darwin Nissley, treasurer; Phil Garber, assistant treasurer; Ron Nolt and Keith Wolgemuth, game leaders; Barbara Miller and Chris Erb, song leaders; Judy Stoltzfus, news reporter; Richard Yuninger and Chris Erb, County Council members.

The next meeting will be held at the Wilbur I. Beahm Junior High School.

Credit Practices In Feed Industry Studied

Millers and feed dealers of Pennsylvania have become major sources of short-term credit for farmers, economists at The Pennsylvania State University report.

A study of feed mills of all sizes found credit being extended by 85 of the 90 firms surveyed. Credit accounted for over one-half of the total sales among 60 per cent of the millers in the study.

The sampling was representative of the 1,000 mills in the Commonwealth, says Dr. Clarence E. Trotter, professor of marketing who directed the project. Working on the analysis was Lynn Chubbuck of Rome, Pa., former graduate assistant in agricultural economics.

The requirements of Truth-in-Lending, Dr. Trotter observes,have brought about two distinct changes in credit practices in the feed industry. Many feed mill operators have dropped cash discounts to reduce the costs of complying with the Truth-in-Lending law. And secondly, many millers have added an interest charge to encourage customers to pay their credit accounts on time. The typical payment period is 30 days.

It appears, the economist adds, that the Truth-in-Lending law encouraged most millers to adopt a credit policy which may not have existed before the act was passed. Dr. Trotter believes this indicates that the Truth-in-Lending law was good for the feed industry. When a policy had to be stated, credit procedures were formulated and company changes were made.

The study was made at the request of the Pennsylvania Millers and Feed Dealers Association, in cooperation with the Agricultural Experiment Station and the Cooperative Extension Service at Penn State.

Fifty percent of the millers set credit limits for customers before credit was granted. Because a customer's credit status may change, limits were set or revised by 62 percent of the millers after credit use was begun.

Canned Water Can Be Expensive

Here's a riddle for careful shoppers. When does a glass of water cost the mosst? Answer–when it's added to the soup before it leaves the factory.

For years, Americans have bought condensed soup and added the water at home. But recently, manufacturers have found that people will buy ready-to-serve- soup.

Carol Rothermel, assistant Extension home economist, points out that buying ready-to-serve soups nearly triples the cost. And what's more you have to carry the additional weight of the water home from the store.

Water is also added to other products such as puddings and whipped toppings. Premixed fruit drinks often contain only six percent actual fruit and the rest is mostly water.

Sometimes convenience foods save you time--you have to decide if it's worth the extra cost. And some of the convenience foods will save you cooking and chores. Some also take the guesswork out of the cooking.

But in the case of ready-to-serve soups and fruit drinks, you are only saving yourself the addition of water. Instead of buying and carrying home the water, you could save money and your energy by buying the undiluted products and turning on your own faucet.

Moldy Cheese

Mold on cheese is usually a harmless form and doesn't affect the remainder of the cheese for safe eating unless it penetrates too deeply into the cracks. Extension diary specialists at The Pennsylvania State University suppests scraping off surface mold or cutting away the portions of the cheese that contain mold. Mold spots develop on cheeses because of improper wrapping or moist conditions.

SOLAIR BARNS
FEATURING OUR SECURITY FREE STALL

We make a high Security Free Stall from high grade boiler type steel that will last and last. A bedding board is installed and the stall is elevated above the scrape area. Extra floor space is given to each animal and a maximum drinking area is provided. A step along the feed trough allows easy access to the feed but prevents manure from falling into the trough.

Grain Purchase Prospects

The U. S. Department of Agriculture said the Soviet Union is still expected to purchase sizeable quantities of grain on the world market for delivery in the 1973-74 marketing year starting in July, although in recent weeks there appears to have been an improvement in Soviet grain crop prospects for 1973.

The expectation of purchases has been strengthened by recent trade reports from Europe that the Soviets have lately chartered large numbers of third-country vessels suitable for carrying grain. Trade reports indicate that the Soviets recently chartered for use during the next 18 to 20 months enough vessels to carry an estimated six-million tons of grain annually. This tonnage is in addition to vessels chartered earlier, and does not include grain to be carried on U.S. and Soviet-flag vessels.

Last year, the Soviets purchased 28 million tons of grain from all sources, mostly for delivery in the 1972-73 marketing year. The purchases included about 19 million tons of wheat and nine-million tons of other grains, mainly corn and barley.

Current crop prospects and shipping information indicate the Soviets may in 1973-74 take about half the total quantities purchased in 1972-73. Current world grain prices, however, would tend to point to a larger proportion of corn in 1973-74.

The Department pointed out that it is still early to make firm forecasts about the 1973 Soviet crop, especially since most of the spring grain is yet to be planted. The Soviets will undoubtedly be reviewing their import needs as the crop progresses.

Horses Need Dental Checkup

Spring is a good time for horse owners to have their animal's teeth checked, reminds Dr Sam B Guss, Extension veterinarian at The Pennsylvania State University. Dental problems should be suspected when the horse eats very slowly or holds his head to the side while chewing Veterinarians are usually able to correct common dental problems

Seeking Legislative Approval On New Farm Show Complex

Commission and Committee members of the Pennsylvania Farm Show will press hard this year for legislative approval of a new Farm Show arena.

The Commission and Committee, holding successive meetings recently, agreed that the need for a new Farm Show Complex was greater than ever.

The old complex, dedicated in 1931, "has seen its day," Agriculture Secretary Jim McHale told representatives of some 60 farm organizations at the meeting of the Farm Show Committee.

Spokesmen for the State Council of Farm Organizations, the State Horticultural Association, the Pennsylvania Vegetable Growers Association and other groups attending the meeting termed 1973 Farm Show "a booming success."

McHale said the record breaking attendance at the 1973 Farm Show points up the need "all the more for a modern facility."

The secretary attributed the success of the show to the cooperative efforts of the Department of Agriculture, the Farm Show Commission and Penn State University. "It was a great team effort."

At the Commission meeting Rep. Reno H. Thomas (R-Snyder County) and Merle E. Miller, a Cumberland County farmer, were renominated to the 12-man Commission. Nine other names were also submitted for nomination.

It was also announced that H. R. McCulloch, assistant secretary on both the Committee and Commission, is retiring from his post.

The Farm Show Committee will hold its next meeting May 31, at which time a special committee will submit revisions for next year's Farm Show Premium List. This publication is a compendium of all the rules and regulations pertaining to each event at the annual week-long Farm Show.

Pequea Valley FFA Elects New Slate Of Officers

The Pequea Valley Chapter, Future Farmers of America, elected a new slate of officers at a recent meeting. Elected to serve the Chapter for the coming year are: Gordon Hoover, president; Jere Skiles, vice-president; Carl Caskey, secretary; Charles Neff, treasurer; Nelson Martin, reporter; Tom Denlinger, chaplain; Don Miller, student advisor and parliamentarian, and John Beyer, sentinel.

The various projects carried by each of the new officers are as follows:

Gordon Hoover - Dairy herd of three cows and two heifers, bee hives (five colonies) and five acres of corn.

Jere Skiles - Two dairy heifers, five colonies of bee hives, and 10 acres of corn.

Charles Neff - Two cows, one heifer, swine, veal calves, and four acres of corn.

Carl Caskey - Woodlot management and conservation project.

Nelson Martin - One dairy heifer and veal calves.

John Beyer - Two dairy heifers and two acres of corn.

Tom Denlinger - Two dairy heifers, swine, rabbits, poultry, and work experience.

Don Miller - Two beef animals, poultry, four acres of corn, pheasants, veal calves and dairy calf.

Chapter plans for next years activities include the Holiday Citrus Sale, donkey basketball game, summer swimming party, hayride, sports and recreation nights throughout the year, expansion of the greenhouse project, and ice skating party, and many other Chapter and community-orientated activities.

Wheat Promotion Projects Approved

The U.S. Department of Agriculture (USDA) approved four wheat market promotion projects developed and recommended by the National Wheat Institute.

The four wheat promotion projects are: (1(development of an educational film on wheat marketing; (2) participation in an industry-sponsored national program to improve the image of agriculture and wheat producers; (3) stimulation of consumer interest in wheat and wheat products through the National Sandwich Month and Contest; and (4) expansion of the National Day of Bread Program.

Authorized by the Wheat Research and Promotion Act of 1970 (84 Stat.885), the projects are financed from funds remaining from the 1968 sales of export marketing certificates for wheat not claimed by producers. The four projects are estimated to cost $101,375.

The Wheat Research and Promotion Program is administered by the National Wheat Institute. The Institute has a seven-man Board of Directors, each director himself a wheat producer, and is comprised of seven farm organizations.

More Good Egg Prices Predicted

By Kermit Birth
Poultry Marketing Specialist
Penn State

Egg prices are expected to average well above a year earlier through the next 6 months. Feed prices will drop a little from the highs in March Both higher egg prices and lower feed prices will aid in improving profits. Increased profitability means increased production later this year.

Hatch of chicks for laying flock replacements in January and February 1973 was about the same as a year earlier. But on March 1 13 percent more eggs were in incubators than a year earlier. Perhaps more pullets will be needed to replace force molted hens. With higher than usual feed costs, force molting of layers may not be as profitable as in prior years.

The nation's laying flock produced over 5 billion eggs during February This was 9 percent less than a year earlier. But after adjusting for the extra day last year, production would only be about 6 percent less than a year earlier. This would be the same rate of decline in production as for December and January Production will continue lower because on March 1, 6 percent fewer layers were on farms than a year earlier.

The decrease in production as compared to a year earlier is likely to continue for the next 4 to 6 months unless the proportion of hens in the nation's laying flock which are force molted increases On the first of March about 10 percent of the layers on farms had been through a forced molt, about ½ percent less than a year earlier However, the number of hens which were being force molted the first of the month was up about ½ percent more than a year earlier. The proportion of force molted hens in the nation's laying flock may increase if profitability increases and pullets are not available to replace hens now on farms and make expansion possible.

On March 1 there were only about 3 percent more pullets 3 months old and older but not of laying age on farms than a year earlier Hens and pullets of laying age, plus pullets 2 months old but not of laying age, were about 5 percent less than a year earlier, insufficient pullets were available to offset reduced numbers of layers on farms

It would take about a 5 percent decrease in production to keep prices high enough to offset higher feed costs as compared with a year earlier Rate of lay in the next 6 months is likely to equal or drop below levels of a year earlier Fewer young pullets and more older hens -- an older average age -- add up to a reduced rate of lay

Expansion of production can be expected However, with a high proportion of hens already force molted and only a small increase in the number of pullets not of laying age on farms the opportunity to increase production is limited until more pullets can be grown for laying flock replacements

Will there be a mad scramble to increase production or will caution be exercised this year? Hoping for limited expansion may be too much to expect But a new dimension has been added future prospects for feed prices. For decades feed prices have been stable and those planning expansion of the following year's production could estimate fairly closely the cost of feed No one expected the increase that took place in late 1972 and the first 3 months of 1973. The feed supply and price situation are influenced by the total world situation. An upgrading of human diets and desire for more meat have increased the demand for feed grains. Thus, as one looks at the feed situation, he must consider worldwide implications rather than the U.S. situation alone.

Profitability of the egg industry, as of mid March, will lead to expansion and lower prices. Perhaps one can hope the industry will not expand production to the extent of creating an adverse profit-price situation as occurred in 1971 and 1972. Perhaps external forces, uncertainty about feed prices, supplies, and credit will help temper expansion.

Public Sale
OF VALUABLE FARM REAL ESTATE and FARM MACHINERY
TUESDAY, MAY 1, 1973
Time: 9:30 A.M.

In Perry County situated approximately 2 miles east of Blain, just south of Rt. 274 at Andersonburg.

Due to the untimely death of Richard Thomas the undersigned will offer at public sale the following:

FARM REAL ESTATE
At 1:30 P.M.

TRACT NO. 1

All that certain tract of land situate in South West Madison Twp., Perry Co., containing 270 acres, more or less, approx. 30 acres in pasture, in excess of 200 acres tillable, balance woodland with some good timber. Having thereon erected a beautiful 8-room solid brick house with an ultra-modern kitchen, oil hot air heat, full bath, wall to wall carpet, the walls are finished with very nice panelling, several fireplaces, cement basement with fireplace.

Large 3-floor bank barn fixed for steers and hogs, running water in barn and also to an adjacent steer shed, barn and barn yard are cemented. Hog pen, chicken house, wagon shed, machine shed and other outbuildings. The water supply to house and barn is from a strong spring; also a stream by the buildings.

NOTE: This is a very good and productive farm. If you are looking for a good farm don't miss this sale.

TRACT NO. 2

All that certain tract of land situate in South West Madison Twp., Perry Co., adjacent to the farm, containing ½ acre, more or less, having thereon erected a 5-room frame house with bath, furnace, garage, good well and other small outbuildings.

Terms: Real Estate 10% down, other terms at sale time.

(Approximately 15 Head Of Feeder Cattle)

Berks County Farmer Chairs Milk Marketing Advisory Council

John Kooker, Blandon, a Berks County dairy farmer, is chairman of a newly formed Milk Marketing Advisory Council named by Secretary of Agriculture Jim McHale to provide a continuing line of communication between the Department and the state's milk producers.

The Council is made up of 17 members representing a cross-section of dairymen, farm organizations and leading milk cooperatives. Vice chairman is Willis Greaser, Williamsburg, Blair County.

"I look forward to having the Council's thinking and recommendations on matters affecting dairymen and the milk industry in general," Secretary McHale said in announcing formation of the Council. "I expect the Council to propose for Department consideration and action a variety of programs which will benefit our dairymen, who make up the largest single segment of Pennsylvania's $1 billion agricultural industry."

The Department has similar marketing advisory councils for fruit, vegetables, potatoes, mushrooms, grapes, nursery stock, poultry, eggs, and roadside markets.

Besides John Kooker and Willis Greaser, members include: James Beaver, Bellefonte; Jay Frey, Conestoga; Marl Garlock, McConnellsburg; Leo Noll, Ebensburg; Duane Hartzell, Slippery Rock; Norman Hutcheson, Stoneboro; Leon Kirkhoff, Bernville; Robert B. McSparran, Peach Bottom; Frank McDuff, Venango; Kenneth Mummert, Chambersburg; Clyde Robison, Coal Center; Harold Rotz, Waynesboro; Alpheus L. Ruth, Fleetwood; Peter Sandfort, Scranton; John Strittmatter, Ebensburg.

Edison Osborne, Department milk marketing specialist, is Council advisor.

America's dairy farmers are such good managers that, since 1912, there has been a 79 percent decrease in the hours of labor it takes to produce a hundredweight of milk. And, during the last 18 years, good breeding practices and herd management have raised productivity per cow an amazing 71 percent.
